## 1. General Introduction

### Current Project Status

- **Preparing for a late April startup for first provinces**
- **Finalizing funding with Bonneville Power**
- **Preparing for contracting portions of the project**
- **Designing final implementation issues**
- **Confirming final schedules for implementation**
- **Coordinating with NMFS to consolidate data and information collection for both processes (anadromous programs)**

### Purpose of Meeting

- **Review implementation issues and project schedules**
- **Review data /information methodology**
- **Review involvement needed from managers (time/ schedules/ funding)**
- **Review deliverables, final products for evaluation and data and information that will be available for managers**

### PACIFIC NORTHWEST ELECTRIC POWER

### AND CONSERVATION PLANNING COUNCIL:

### CHARTER OF THE ARTIFICIAL PRODUCTION ADVISORY COMMITTEE

1. Official Designation: This advisory committee will be known as the Pacific Northwest Electric Power and Conservation Planning Council's Artificial Production Advisory Committee.
2. Background: The Northwest Power Act, P.L. 96-501, 16 U.S.C. §839 *et seq.* (Act), in Section 4(h)(1)(A), requires the Council to develop a fish and wildlife program for the Columbia River Basin. The Program establishes the creation of Artificial Production Advisory Committee in order to achieve a regional perspective and a unified approach to artificial production reform. The Artificial Production Advisory Committee is intended to provide the Council with advice on artificial production reform and assist the Council in implementing those reforms. This advisory committee is established as part of a network of advisory committees satisfying the Council's obligation under the Act to establish a Scientific and Statistical Advisory Committee. 16 U.S.C. §839b(c)(11). Under section 4(a)(4) of the Act, the terms of the Federal Advisory Committee Act, 5 U.S.C. Appendix I, Sections 1-14, apply "to the extent appropriate" to the Council's advisory committees. 16 U.S.C. §839b(a)(4).
3. Objectives and Scope of Activity: The Artificial Production Advisory Committee will advise the Council on the implementation of artificial production reform and realignment in the Columbia basin. It will attempt to coordinate these changes in the most consistent and efficient manner possible. The Artificial Production Advisory Committee will fulfill this role by:
  - (A) Assisting the Council in evaluating the appropriate purposes of artificial production programs and facilities.
  - (B) Advising the Council on the most effective ways to implement artificial production strategies described in the 2000 Columbia River Basin Fish and Wildlife Program (Council document 2000-19) and policies and recommendations outlined in the Artificial Production Review report (Council document 99-15).

- (C) Assisting the Council in determining appropriate artificial production performance standards.
  - (D) Proposing actions to the Council to achieve the intended reform.
  - (E) Helping to identify sources of artificial production information and data.
  - (F) Assisting in the review of specific artificial production programs.
  - (G) On a quarterly basis, reporting to the Council on the status of artificial production reform in the basin.
4. Official to Whom the Advisory Committee Reports: The Artificial Production Advisory Committee will report to the Executive Director of the Council.
  5. Authority of the Advisory Committee: The Artificial Production Advisory Committee will serve in an advisory capacity only. Neither the Committee nor its members are authorized to make statements or commitments on behalf of the Council. Committee members will not be considered to be members of the Council staff.
  7. Advisory Committee Management Officer: The Advisory Committee Management Officer for the Artificial Production Advisory Committee will be the Director of the Council's Fish and Wildlife Division. The Management Officer will designate members of the Council's staff to attend meetings of the Committee.
  8. Appointment of Artificial Production Advisory Committee Members: Members will be appointed by the Council. Membership will include individuals from fish and wildlife agencies, tribes, independent scientists, and representatives of non-governmental organizations.
  9. Length of Committee Membership: Artificial Production Advisory Committee members will serve two years. Terms may be staggered to maintain some continuity to the Committee.
  10. Chairperson:
    - (A) The Chairperson will be a Council staff member designated by the Management Officer.
    - (B) The Chairperson may be called upon to report to the Executive Director of the Council on appropriate matters, including the Advisory Committee's progress on the tasks described in Part 3 of this Charter.
    - (C) The duties of the Chairperson will include presiding over Artificial Production Advisory Committee meetings, ensuring that detailed minutes of such meetings are prepared and submitted to the Executive Director of the Council in a timely manner, and maintaining communication between the Committee and the Council's staff.
    - (D) The Chairperson will certify detailed minutes of meetings of the Artificial Production Advisory Committee. The minutes will include a description of matters discussed, conclusions reached, actions taken, persons invited to meet with the Committee, and

persons in attendance. The minutes also will include copies of reports received, issued or approved by the Committee. Minutes of meetings will be prepared and released within ten days of the meeting, unless an extension is granted by the Management Officer. The Management Officer will distribute copies of the minutes to members of the Committee and the other interested persons.

- (E) Sub-groups of the Artificial Production Advisory Committee may be established by the Chairperson of the Committee to undertake particular aspects of the Committee's work. Methods for organizing the work and procedures of the Committee must follow the scope of responsibilities assigned to the Committee by the Council. The work of the staff for the Committee will include making arrangements for Committee meetings, solving logistical problems, and providing clerical services.
  - (F) The Chairperson will be responsible for calling meetings, setting the agenda, closing meetings, coordinating work with the Council, and managing the business functions.
11. Policy: The advisory committee policy approved and adopted by the Council on May 17, 1982, as amended from time to time, will apply to the Artificial Production Advisory Committee.
  12. Estimated Frequency of Committee Meetings: The Chairperson of the Artificial Production Advisory Committee, after consultation with the Management Officer, or his designee, will call meetings as necessary. All meetings will be open to the public, unless closed pursuant to 5 U.S.C. §552b(c). Timely notice of meetings, including agendas, will be given. Interested persons may attend Committee meetings and appear before or file statements with the Committee, subject to such reasonable rules as the Committee may prescribe.
  13. Reimbursement of Expenses: The Council will reimburse Artificial Production Advisory Committee members for travel costs, including per diem in lieu of subsistence in accordance with the Council's travel regulations for contractors and advisory committee members, for the purpose of attending Committee meetings as authorized by 5 U.S.C. §5703. In addition, the Council may contract with Board members or others to carry out specific tasks. In particular cases, and with Council approval, the Artificial Production Advisory Committee may recommend the use of consultants to accomplish an assigned task.
  14. Duration: The Artificial Production Advisory Committee will terminate two years from the filing date of this Charter, unless renewed in accordance with the Federal Advisory Committee Act. All members of the Committee serve at the pleasure of the Council.

This Charter for the Artificial Production Advisory Committee was approved and adopted at a duly called meeting of the Pacific Northwest Power and Conservation Planning Council,  
\_\_\_\_\_, in \_\_\_\_\_, \_\_\_\_\_.

*DRAFT DRAFT DRAFT DRAFT DRAFT DRAFT*

October 10, 2001

Northwest Power Planning Council, Artificial Production Advisory Committee

Date: October 10, 2001

Time: 9:00 AM to 2:25 PM

Location: Northwest Power Planning Council Offices, Portland, OR.

### *Draft Meeting Minutes*

#### Agenda Items -

1. General Introduction
2. Members Introduction
3. Administrative Issues and Questions
4. Review Agenda
5. Current Schedule and Workplan Update
6. NMFS Bi-Op RPA on Marking Spring Chinook
7. Status of HGMP's (NMFS, USFWS)
8. Data and Information Needs
9. Facility and Program Evaluation

**Brian Zimmerman**, Confederated Tribes of the Umatilla Indian Reservation and **Patty O'Toole**, Confederated Tribes of the Warm Springs Reservation of Oregon participated by telephone.

**Bruce Suzumoto** opened the meeting at 9:05 am. This meeting was a meeting of the anadromous workgroup members of APAC. The resident fish workgroup will be meeting in Lewiston, Idaho on October 16, 2001.

There were no comments on the minutes of the last meeting. **Bruce Suzumoto** reviewed the agenda. **Tom Scribner** had requested that **Larry Rutter**, NMFS, give a report on the Hogan decision about hatchery fish.

**Larry Rutter** explained that almost 2 years ago, in the 4-H process, NMFS found that there was a serious problem distinguishing hatchery-origin fish and natural-origin fish in the environment and this was confusing knowledge about the ESA status of populations. A second issue was the role of marking in selective fisheries.

A work group has been recently formed and is now meeting to develop a comprehensive plan for the fish marking as called for in the FCRPS BiOp. NMFS has not stated that “all” spring Chinook need to be marked. The result of the work group will be a plan that indicates which fish should be marked for what reason. The FCRPS BiOp only resulted in new marking protocols at Leavenworth, Carson, and Little White National Fish Hatcheries. **Larry Rutter** indicated that not all spring Chinook would be marked in the future in the Columbia Basin.

The comprehensive marking plan is scheduled for completion in June of 2002. The scope of this plan is for chinook, coho, and steelhead in the Columbia Basin, but it will also be coordinated on the west coast. The plan will cover numerous types of marks, not just fin clips. The core group initiating the comprehensive marking plan includes tribes, USFWS, Oregon, Washington, and NMFS.

**Rob Walton** asked if similar fish marking issues are occurring in Puget Sound and in California? **Larry Rutter** responded that they were, particularly in Puget Sound where hatchery fish greatly affect Pacific Salmon Treaty requirements.

**Larry Rutter** commented on the Hogan decision and indicated that the review done by John Shurts was very insightful. NMFS thinks the reasons for not listing the hatchery fish are still valid. These included the ability to continue fisheries. The issue of what to do about the Hogan decision is being reviewed in NMFS headquarters this week. NMFS decided not to seek a stay in the decision. NMFS has not been able to respond about whether to appeal or other actions as quickly as they might due to the current change in NMFS leadership.

NMFS is analyzing implications to other ESUs. **Larry Rutter** mentioned that he was not sure if this issue was being reviewed for species other than anadromous salmonids. **Lee Hillwig** said that there are discussions ongoing within USFWS about potentially wider implications.

**Steve Smith** suggested the Council put the John Shurts’ analysis on its web site if it is not already there.

**Rob Walton** wanted to know if the Hogan decision was affecting the ability or proposal to harvest Upper Columbia River Steelhead of hatchery-origin. **Larry Rutter** was uncertain of the status of the harvesting issue. He suggested contacting Bill Robinson or Rob Jones about this issue.

Per the HGMP template, **Larry Rutter** stated that NMFS settled on the HGMP template as a means to get common information to meet ESA regulatory processes – with the support of fishery managers. The template then got integrated into the APR report. The HGMP then became a key component of the 4(d) Rule on threatened species to limit take prohibitions. [**Larry Rutter** distinguished between the HGMP and the HGMP template] NMFS has been including in section 7 consultations that HGMP template be used. What

confused the issue was the FCRPS BiOp that declared jeopardy on the hydrosystem, requiring off-site mitigation in hatcheries, harvest, and habitat to achieve increases in survival that could not be achieved in the operations of the hydrosystem. Under this process, HGMPs are being developed to not only ensure the hatcheries are not jeopardizing listed fish, but also could result in hatchery actions that would increase survival of listed fish that would help offset unavoidable mortalities associated with the FCRPS. This must be very clear that hatchery actions to avoid jeopardy can be mandated, are different than discretionary actions to change hatcheries to increase survival of listed fish as mitigation for the FCRPS. NMFS does not want to change the basic HGMP template, but is considering an addendum that would describe hatchery operations that could contribute to recovery.

Problems with getting HGMPs done are due to start up issues - transitioning from section 7 to 4(d) and the confusing nature of crediting under the FCRPS BiOP. Also there are so many processes that refer to using the HGMP that it is hard to get a common understanding. There are also funding and staffing issues to get HGMPs done and whether they should be done right away for hatchery programs that already have ESA coverage. **Lee Hillwig** stated that HGMPs would be dynamic documents once completed. USFWS may get appropriated funds in FY'02 to undertake some HGMPs. With regards to listed bull trout and sturgeon, USFWS did not find the FCRPS in jeopardy for these resident fish so there are no requirements for HGMPs. The USFWS will be using a modified HGMP template for resident fish.

NMFS has several draft HGMPs that have been turned in. These are undergoing negotiations between NMFS and the entity that submitted the HGMP. To Date no HGMP's have been approved.

## **Break**

**Dan Warren** gave an update on the work schedule for the Hatchery Review and Evaluation (page 22 of handout). A key first step is to collect and consolidate base information. The Phase I report would be completed in July 2002 with the Phase II report completed in December 2002. This would address about 120-140 different programs. **George Nandor** remembered that IHOT addressed about 140 anadromous fish programs. **Lee Hillwig** expressed concerned that July 2002 may be optimistic for completion of a Phase I report. **Rob Walton** countered about the frustration of regional leaders for some important hatchery information. One product of the Phase I report will be a mid-point audit of the hatchery reforms in the region.

Council staff met with NMFS prior to this APAC meeting to be sure each hatchery work is integrated and not duplicative. **Dan Warren** reviewed page 23 of the handouts on the data information needs for the Hatchery Review. Most of the data will be from states and USFWS, with tribes on a more limited basis. **Chuck Johnson** mentioned that WDFW's Future Brood Document is maintained in Olympia. **George Nandor** mentioned ODFW's Hatchery Production Schedules, as the key central database for their hatcheries. USFWS has its Columbia River Information System with its hatchery and brood data. **Lee**

**Hillwig** suggested a subgroup of data managers: Steve Pastor for USFWS and Kyle Addicks for WDFW. The Yakama hatchery data should be in WDFW's database. **Dan Warren** wants to use existing databases as much as possible as long as data is current and answers the key questions needing to be addressed. **Bruce Suzumoto** reiterated the need for a centralized current data on all Columbia Basin hatchery production.

**Tom Scribner** suggested getting the old PAC annual production spreadsheets that may have much of this information and were used to predict adult returns and distributions.

**Bruce Suzumoto** requested written comments on page 24 – purposes and outcomes in the next week.

There was discussion about “alignment and nonalignment” as a result. The key issue here is alignment of key operations with the stated facility/ program purpose, not so much alignment of the operations with original mandate.

The Phase I template was reviewed. Comments will be reflected in the next draft of the template.

A key area of discussion was how to collect O&M costs in Phase I. To collect any data requires getting very detailed data. Otherwise the information might be misused. **Bruce Suzumoto** and **Dan Warren** will go back and rethink the questions related to costs.

### **Lunch.**

The smolt quality goal needs more thought as to what to measure the PSI indicator for smoltification refers to a regional smoltification index “when developed”

The incubation and rearing question needs work, particularly on what is natural incubation specific elements from the SRT report should be incorporated into the question

On research, the question may be whether this should explore research of propagation itself or explore the issues surrounding the need for and use of hatchery fish for studies of passage, habitat, etc.

**Ian Fleming** thought the questioning on research should be included under each purpose. Are research facilities included at the hatchery?

No meeting is currently planned for November.

Meeting adjourned at 2:25 pm.

**October 29, 2001**

**Northwest Power Planning Council, Artificial Production Advisory Committee**

**Date: October 16, 2001**

**Time: 8:00 AM to 12:00 Noon**

**Location: Red Lion Hotel**

**621 21st Street**

**Lewiston, ID 83501**

**General Work Session Issues (these are not meant to be specific meeting notes)**

### **Agenda Items**

1. General Introduction Overview and Review for New Meeting Attendees
2. Members Introduction (Self re-introduction and other members )
3. Administrative Issues and Questions
4. Minutes and Attachments from last meeting
5. Review Agenda
6. Review / Current Schedule and Workplan Update
7. Key Issues and Current Status
8. Status of HGMP's (USFWS)
9. Data and Information Needs
10. Work Session
11. Facility / Program Evaluation Template Phase I (Resident Fish)
12. Facility / Program Evaluation Template Phase I and II (Resident Fish)

This session was scheduled in coordination with a Columbia Basin Fish and Wildlife Authority Resident Fish Committee Meeting. The Artificial Production Advisory Committee (APAC) presentation and discussion started about 8:15 AM and was completed at about 12:00 noon

The presentation content was from a meeting packet, which is posted on the Northwest Power Planning Council's web site at [www.nwccouncil.org](http://www.nwccouncil.org).

The purpose of this work session was to:

- provide an overview of the Council's Artificial Production Advisory Committee (APAC) Facility / Program review

- obtain specific input from Resident Fish Managers on the APAC Facility/ Program Review and Evaluation and specifically the Phase I Template for resident fish facilities and programs

Comments and suggestions are being incorporated into a second draft of the Template for Facility/ Program Purpose Review and Evaluation, Phase I Resident Fish. This draft will be sent out to APAC members for comment.

Some of the issues brought up in the work session were;

- concern with workload on managers especially with Subbasin planning coming up and concerns in relation to schedules
- concern with how Council contractors would interact with fisheries managers
- overlap with HGMP Process
- Lee Hillwig and Mike Faler (USFWS) discussed the HGMP process
- concern with review covering non-BPA funded facilities
- organizing questions in the template into a “suite” of questions for each facility/ program purpose
- how to fairly evaluate cost of facility or program operations.

# HSRG Overview

# ***Hatchery Reform in Puget Sound & Coastal Washington***

## ***A Scientific and Systematic Redesign of Hatcheries Programs to Help Recover Wild Salmon and Support Sustainable Fisheries***

---

### **The History of Hatcheries: Management for Production**

There are approximately 100 hatchery facilities in Puget Sound and Coastal Washington operated by the Washington State Department of Fish and Wildlife (WDFW), Puget Sound and Coastal Indian Tribes, and the US Fish and Wildlife Service (USFWS). These hatcheries produce more than 100 million juvenile salmon and steelhead every year, playing an important role in the North Pacific sports and commercial fishing economy and in meeting tribal treaty harvest obligations. In operation for decades, most hatcheries were built to produce fish for harvest, compensating for declines in wild salmon populations.

Hatcheries have generally been successful at fulfilling this purpose. However, they have also been identified as one of the factors responsible for the depletion of wild salmon stocks. Some facilities have created stresses for wild fish, kept smolts from getting downstream and spawning fish from getting upstream, and lowered water quality. Physical and genetic interactions between wild and hatchery fish may have weakened natural stocks. Hatchery management decisions have often been piecemeal, not system-wide.

### **The Future: Management for Sustainable Fisheries and Recovering Wild Stocks**

With several Puget Sound and Coastal salmon and steelhead stocks listed or proposed for listing under the federal Endangered Species Act (ESA), producing fish for harvest can no longer be the sole purpose of hatcheries. As part of a larger recovery process, state, tribal and federal managers of Washington's salmon and steelhead resources must ensure that their hatcheries do not present a risk to listed species. But the managers are seeking to go beyond merely complying with ESA directives that hatcheries be operated to minimize risks to endangered fish. They have embraced a new vision of reforming hatchery programs to provide *benefits* to the process of recovering wild salmon and providing sustainable fisheries. The managers have established a Hatchery Reform Coordinating Committee (Coordinating Committee) to work together on the "big picture" of this effort to reform hatcheries.

### **The Hatchery Reform Project**

In May 1999, a group of leading scientists presented its recommendations in a report entitled *The Reform of Salmon and Steelhead Hatcheries in Puget Sound and Coastal Washington to Recover Natural Stocks While Providing Fisheries*. The report determined that the potential exists for hatcheries to have a major positive impact on the recovery of wild salmon, in just a few years and at relatively small costs. The team called for a comprehensive hatchery reform effort, led by a panel of independent scientists, to conserve indigenous genetic resources; assist with the recovery of naturally spawning populations; provide for sustainable fisheries; conduct scientific research; and improve the quality and cost-effectiveness of hatchery programs. With the support of then-Senator Slade Gorton (R-WA), Senator Patty Murray (D-WA), Congressman Norm Dicks (D-WA) and Washington Governor Gary Locke, the US Congress adopted and funded the recommendations in fiscal year 2000, launching the Puget Sound and Coastal Washington Hatchery Reform Project. The project is a systematic, science-driven redesign of how hatcheries will be used to achieve new purposes: 1) helping to recover and conserve naturally spawning populations and 2) supporting sustainable fisheries. The appropriations language provided funding to:

- Establish an independent scientific panel to ensure a scientific foundation for hatchery reform;
- Provide a competitive grant program for needed research on hatchery impacts;
- Support state and tribal efforts to implement new hatchery reforms; and
- Provide for the facilitation of a reform strategy by an independent third party.

# ***Hatchery Reform in Puget Sound & Coastal Washington***

---

## **Comprehensive Reform Driven By Independent Science**

The Hatchery Scientific Review Group (Scientific Group) is the independent scientific panel established by Congress to evaluate hatchery reform programs in Puget Sound and Coastal Washington. The objective of the Scientific Group is to assemble, organize and apply the best available scientific information to provide guidance to policy makers who are implementing hatchery reform.

The Scientific Group is composed of five independent scientists (selected from a pool of candidates nominated by the American Fisheries Society) and four agency scientists designated by WDFW, the Northwest Indian Fisheries Commission (NWIFC), NMFS and USFWS. Like the independent scientists, the agency scientists are responsible for evaluating scientific merits and are not to represent agency policies. The nine scientists serving on the Scientific Group have a broad range of experience. Their scientific disciplines range from biology, genetics, ecology, fisheries, fish culture, fish pathology, and biometrics to other disciplines. Members include:

- John Barr, NWIFC (Vice Chair)
- Lee Blankenship, WDFW (Vice Chair)
- Donald Campton, PhD, USFWS
- Trevor Evelyn, PhD, Department of Fisheries and Oceans Canada (retired)
- Conrad Mahnken, PhD, NMFS Manchester
- Lars Moberg, PhD, Moberg Biometrics (Chair)
- Robert Piper, USFWS, Bozeman, MT (retired)
- Lisa Seeb, PhD, Alaska Dept. of Fish & Game
- William Smoker, PhD, University of Alaska

The third party facilitator specified by Congress is Long Live the Kings (LLTK), a private, non-profit organization whose mission is to restore wild salmon to the waters of the Pacific Northwest. LLTK's role includes providing facilitation and staff support to the scientific panel and the Coordinating Committee; and helping the managers communicate hatchery reform progress to Congress, state legislators, stakeholder groups and the public. LLTK was also invited to serve on the Coordinating Committee.

## **Where Does The Process Stand?**

Since its inception, the Scientific Group has held monthly, three-day meetings, during which it has developed: 1) a scientific framework to inform its decision making and recommendations; 2) a benefit/risk assessment tool that can be used to evaluate benefits and risks associated with specific actions and choices in hatchery management; 3) hatchery operational guidelines to implement reform at each facility; 4) a research program to fill information gaps (to date, the Scientific Group has funded two rounds of research totaling over \$1.25 million); and 5) monitoring and evaluation criteria to determine the success of hatchery programs and gather data for research.

The Scientific Group and Coordinating Committee agreed that it is important to evaluate hatchery programs in the context of the watersheds in which they operate and the goals set for them by the managers. For this reason, they divided Puget Sound and the coast into ten regions, providing an opportunity to make region-by-region recommendations based on: 1) regional management goals for conservation, harvest and other purposes; 2) stock status (biological significance and population viability); 3) habitat status (current and future); and 4) the particulars of each hatchery program. The first three regions were conducted during 2001. A written report on these regions was completed in February 2002. Four more regions will be reviewed in 2002 and the final three in 2003. The ten regions include:

- Eastern Straits
- South Sound
- Stillaguamish/Snohomish Rivers
- Skagit River Basin
- Nooksack/Samish Rivers
- Central Sound
- Grays Harbor
- North Coast
- Hood Canal
- Willapa Bay

### **NWPPC Artificial Production Advisory Committee**

# Section 5. Overview, Description of Work for Each Province

# Artificial Production Review and Evaluation (APRE)

## Description of work for each province

---

### Work steps

Common  
Tasks 1-5

#### 1. Define goals/objectives summarized by province

- Conservation goals
- Goals for harvest
- Program purpose
- Program objectives

#### 2. Review operational information

- M & E programs
- Program data
- Harvest and return data
- Costs and budget constraints

#### 3. Review Program for consistency with goals/objectives

- Is Program consistent with:
- Conservation goals?
  - Harvest goals?
  - Laws and agreements?

#### 4. Formulate draft conclusions and recommendations by province

#### 5. Review draft conclusions and recommendations with APAC and others; clarify issues, obtain feedback

#### 6. Finalize conclusions and recommendations by province and basin

# Artificial Production Review and Evaluation (APRE)

## Description of work for each province

partially aligned  
not aligned  
not enough information

**review areas**  
capital costs  
science/genetics  
FC practices  
harvest/management  
economics  
legal

#### 4. Formulate draft conclusions and recommendations by province

#### 5. Review draft conclusions and recommendations with APAC and others; clarify issues, obtain feedback

#### 6. Finalize conclusions and recommendations by province and basin

### Tasks

- Develop questionnaire (template)
  - Develop preliminary goals and objectives
  - Conduct initial data/information collection (interviews)
  - Consolidate/organize data and information
  - Frame preliminary goals and objectives
  - Conduct first workshop, confirm goals and objectives (province level/regional managers)
  - Consolidate new information by province
  - Review of programs based on completed questionnaires and provincial goals and objectives by review team.
- Level of detailed analysis based on which programs require it (not aligned).

### Common Tasks 1-5

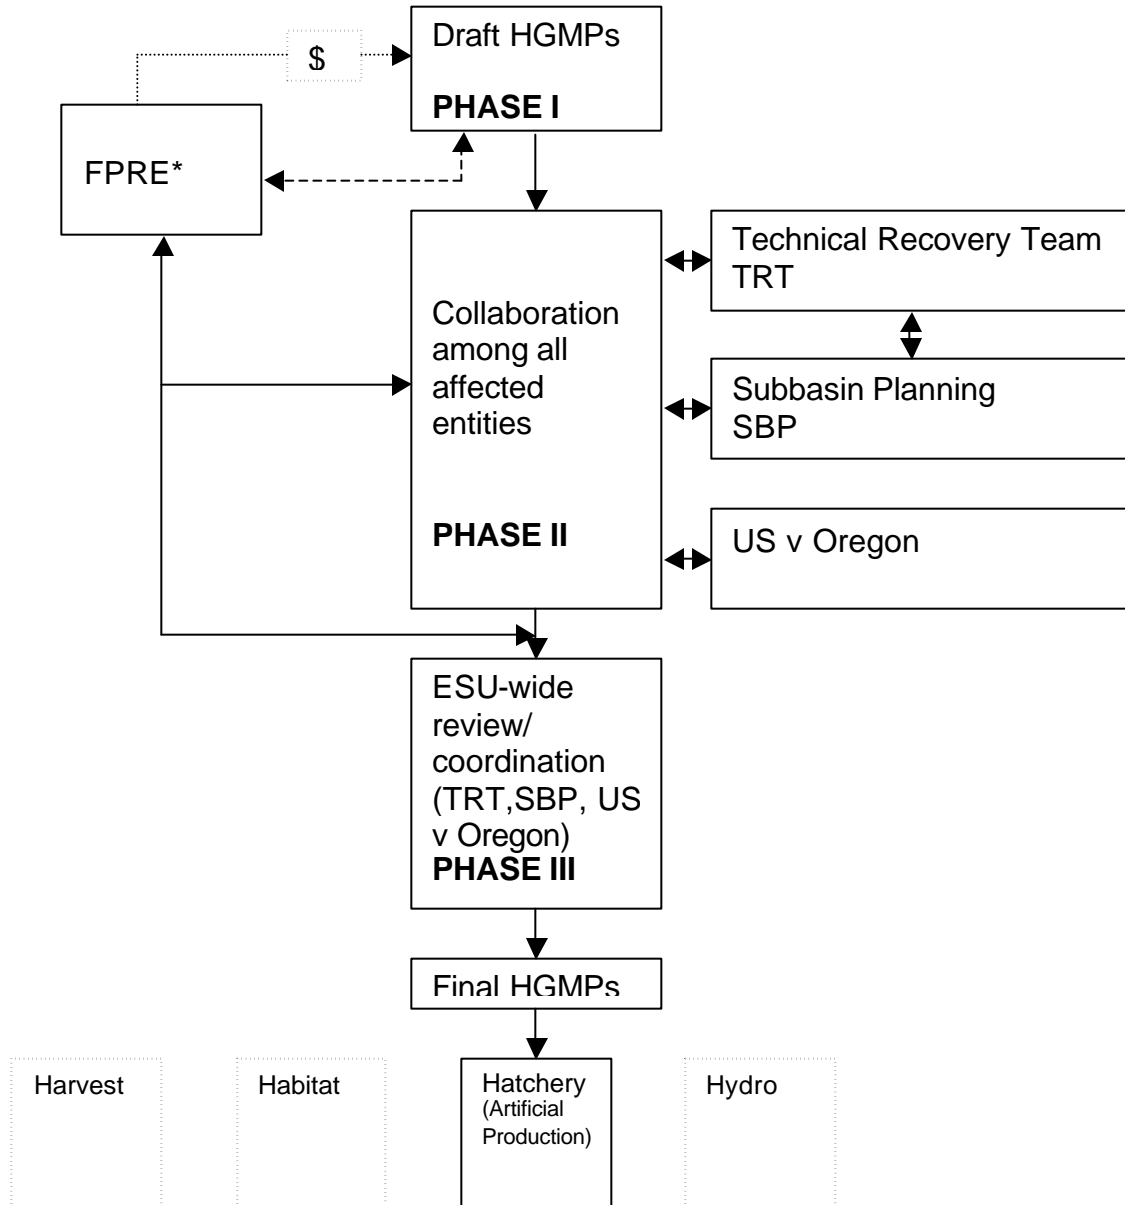

- Draft report completed using finalized information from team and regional managers
- Second workshop with committee/regional managers
- Final "Phase II" report for subbasin planning

February 6, 2002 Draft

### Draft Process

Hatchery and Genetic Management Plan (HGMP) Preparation Process and Relation to other processes involving consideration of artificial production in Columbia River Basin

(Note-these steps may not always occur sequentially; they will sometimes occur simultaneously, depending on when HGMPs are ready for next phase.)

\*Facility/Program Review and Evaluation (FPRE) under Northwest Power Planning Council

## **Goal**

This process will result in an approved HGMP that:

1. Provides a single, comprehensive source of information regarding anadromous salmonid hatchery programs for use in Endangered Species Act (ESA) processes to assess impacts on listed anadromous fish (Sections 4(d), 7, and 10).
2. Creates a source for comprehensive hatchery program information for use in regional fish production and management planning by federal, state, and tribal managers.
3. Facilitates funding and scientific reviews of hatchery programs through coordination with the Facility/Program Review and Evaluation under the auspices of Northwest Power Planning Council (NPPC) and funding requests through the NPPC's Fish and Wildlife program or Federal Columbia River Power System Biological Opinion (FCRPS BO).

## **Process**

### **PHASE I**

1. Operators prepare Draft HGMPs by facility/species/program, capturing existing program, including any recent changes to reflect ESA requirements. Interactions may occur with affected entities during the initial preparation period.

### **PHASE II**

2. Other entities in conjunction with operator, review and provide input via collaboration meetings through 2002 and early 2003. This process produces "Phase II" drafts HGMPs. When/if parties do not agree, options are prepared for Step 4.
3. Scientific Quality Control Group (SQGC) reviews subset of HGMPs and provides scientific/technical feedback.
4. Phase II drafts or phase II options are provided to subbasin planning process and technical recovery team for consideration and interaction with those planning processes. (E.g., Phase II options logically coupled with habitat options to create "scenarios" for TRT and subbasin planning consideration and feedback.)
5. Throughout the process information will be coordinated with US v Oregon CRFMP renegotiation efforts and interim harvest management actions to ensure plans are compatible and complementary.
6. "Phase II", draft HGMPs are completed and set aside (parked) until all HGMPs in Evolutionary Significant Unit (ESU) are finalized, allowing for ESU-wide consideration and feedback with TRT/Recovery planning.

### PHASE III

7. ESU-wide consideration and feedback with TRT/Recovery Team, Subbasin Planning, and US v Oregon Processes. HGMP collaborators incorporate TRT advice as appropriate.
8. HGMP drafts are finalized and ready to submit to NMFS/USFWS for ESA analysis and approvals, serving a function formerly served by biological assessments. The NMFS/USFWS Approval Process should be completed by September 2003. Once approved they are implemented by the operators.
9. Actions that exceed or modify the current responsibility or objectives of facility/program operations may be submitted to rolling provincial review for funding and possible FCRPS offsite mitigation consideration.

#### Additional Comment

The HGMP process will interact with the Facility/Program Review and Evaluation (FPRE) process of Northwest Power Planning Council (NPPC). Although details have not been worked out yet, the processes are viewed as complementary. Phase I draft HGMPs may comport nicely with the information needs of the FPRE, and vice versa. The FPRE process would be informed and also may interact with the HGMP collaboration phase but the timeframe for completion of the two processes may not allow for the total integration of final HGMPs into the FPRE process.

### Common Tasks for each Province (APRE and HGMP's)

**Task 1:** set up simple database tools (tables, forms and reports) to receive and store information. These tools would include the questionnaires needed for both APRE and HGMP, and would be reviewed by NWPPC and NMFS staffs to assure that all required information is covered.

**Task 2:** assemble preliminary information for objectives 1 and 2 (and to a lesser extent objective 3) using existing reports and publicly accessible data. This step would also include the development of the initial assumptions about common areas (mainstem Columbia and Snake and mixed stock fisheries --this might build upon work in progress through the Regional Assessment Advisory Committee). This task would be performed primarily by contractors. (One month per province?).

**Task 3:** upgrade and fill in missing information through an interview process, contractors (with help from NWPPC and NMFS staff) would identify key individuals to contact for answers to specific questions, primarily pertaining to Objective 3. (One month per province?).

**Task 4:** prepare preliminary APRE/HGMP (by species/stock/program) summary reports (from the data base).

**Task 5.** convene a two-day workshop for each province where key managers (harvest, habitat and hatchery) and hatchery operators would be asked to participate. The purpose of this workshop is to make sure that the information captured a) is understood, b) is as accurate as possible, c) missing or unreliable information is identified, and d) to make it clear that the shared HGMP and APRE information maintains its integrity (i.e. ownership of each subset of the data has to be assigned so that a single common data set will exist over time). [Can we assume that at least for anadromous programs the HGMP data base constitute the long term public repository for this information? APRE and future reviews of hatchery programs would have access to this DBS...].

| Item   | Responsibility                                     |
|--|--|
| <b>1. Define goals/objectives by province</b>  |  |
| a. Develop questionnaire (template)  | Contractors / Council Staff                        |
| b. Develop preliminary goals and objectives  | Contractors / Council Staff                        |
| c. Conduct initial data/information collection (interviews)  | Contractors / Council Staff /<br>Agencies / Tribes |
| <b>2. Review operational information</b>   |  |
| a. Consolidate/organize data and information   | Contractors / Council Staff                        |
| b. Frame preliminary goals and objectives  | Contractors / Council Staff                        |
| c. Conduct first workshop, confirm goals and objectives (province level/regional managers)                   | Contractors / Council Staff /<br>Agencies / Tribes |
| d. Consolidate new information by province   | Contractors / Council Staff                        |
| <b>3. Review Program for consistency with goals/objectives</b>   |  |
| a. Review of programs based on completed questionnaires and provincial goals and objectives by review team.  | Contractors  |
| Level of detailed analysis based on which programs require it (not aligned).                                 |  |
| <b>4. Formulate draft conclusions and recommendations by province</b>  |  |
| a. Draft report completed using finalized information from team and regional managers                        | Contractors  |
| <b>5. Review draft conclusions and recommendations with APAC and others; clarify issues, obtain feedback</b> |  |
| a. Second workshop with committee/regional managers  | Contractors / Council Staff /<br>Agencies / Tribes |
| <b>6. Finalize conclusions and recommendations by province and basin</b>                                     |  |
| a. Final "Phase II" report for subbasin planning   | Contractors / Council Staff                        |
