## DECISION MEMORANDUM

**TO:** Council members

**FROM:** John Ollis  
Manager of Planning and Analysis

**SUBJECT:** PSR Licensing and Maintenance for GENESYS

**PROPOSED ACTION:** Staff recommends authorization to contract with PSR Soluções e Consultoria em Energia Ltda (PSR Energy Solutions and Consulting Ltd) in an amount not to exceed \$120,000 for GENESYS licensing and support for the 2026 fiscal year.

**SIGNIFICANCE:** For FY26, staff is recommending renewing the license and maintenance support contract for GENESYS. The GENESYS model is a key quantitative tool used in the Council's power planning process to understand system needs and adequacy.

## BUDGETARY/ECONOMIC IMPACTS

For fiscal year 2026, staff recommends authorization to contract with PSR in an amount not to exceed \$120,000 for the license of GENESYS and maintenance and technical support. Staff has budgeted for this full amount in the FY26 budget.

Note, the Council will also need to continue purchasing cloud computing time to minimize model run time. Staff will provide Council members information on that, as well as other ongoing model licensing costs for the power division technical work, in a separate email.

## BACKGROUND

The Council previously contracted with PSR to redevelop the GENESYS model with the intention of improving model usability and accuracy given the increasing complexity of the regional power

supply. Since the initial development, PSR has maintained dedicated support staff to ensure that the GENESYS model enhancements would be timely to support plan work, adequacy assessments, and model development. Staff recommends contracting with PSR to renew the software license and for PSR's continued model maintenance and technical support services. With the continuation of the maintenance and support services through FY26, PSR will continue to update and upgrade the model, fix all bugs, and provide its technical support team for web-based meetings with Council staff, which will ensure the model's efficiency, functionality, and accuracy. The power division will be relying heavily on GENESYS in FY26 to conduct needs assessments and adequacy assessments as part of the Ninth Power Plan development.

## **ALTERNATIVES**

The Council could decide to not renew the software license and maintenance and support services. This is not recommended. Without the GENESYS license, the Council would be unable to do the necessary hydro and adequacy modeling. Without the added maintenance and support services, staff would be required to invest significant time to ensure model usability. This would delay our ability to complete the Ninth Power Plan and would reduce our overall modeling capabilities.
