### MEMORANDUM

**TO:** Council members

**FROM:** Nancy Leonard

**SUBJECT:** Demonstration and discussion about draft web-page for Program Tools

### BACKGROUND:

**Presenter:** Nancy Leonard (Council staff).

**Summary:** Staff will demonstrate a draft landing web-site and will be seeking Council member input on how to improve this webpage to increase the visibility and accessibility of Program web-tools.

**Relevance:** Status and trend information for Program focal species is to be organized by subbasin, species, habitat, and high-level indicator topics to provide a context to understand the effects of projects funded through the Program. ([Program section V](#)). This information contributes to understanding the progress and facilitates public access to this data ([Program Part Four-Reporting](#)).

**Background:** The Fish and Wildlife division continues to work on providing accessible and current information related to the Program implementation and about the Basin's species. Through the Fish Data Product Technical Services work, QW Consulting, staff from the Fish and Wildlife division, and staff from the Public Affairs division, they have guided the development of a

draft landing webpage that aims to improve accessibility and user-experience to existing Program maps and tools, including the Programs HLI-site, Fish Information site, Program resource maps, and dashboards.

StreamNet continues to work with state and tribal partners to prioritize updating data that supports the Council's fish information graphics showcased through this draft Program- Tools landing website. The Fish Data Product Technical Services effort in maintaining the fish information graphics is facilitated by accessing current data and derived estimates from StreamNet.

**More Info:** To follow link to these Program information resources (tools, maps and other species information sites), place cursor over icon and click.
