

Sixth Annual Report to the Northwest Governors on Expenditures of the Bonneville Power Administration

**to Implement the Columbia River Basin Fish and Wildlife Program of the
Northwest Power and Conservation Council**

1978 - 2006

August 2007

Council Document 2007-19

Summary

In Fiscal Year 2006, the Bonneville Power Administration incurred costs totalling \$851.7 million to mitigate the impacts of hydropower dams on fish and wildlife of the Columbia River Basin. Of this amount, \$137.9 million was for direct spending to implement the Northwest Power and Conservation Council's Columbia River Basin Fish and Wildlife Program. The remainder was money for which Bonneville reimburses the Corps of Engineers and Bureau of Reclamation for fish-related dam operations (\$60.7 million); interest, amortization, and depreciation (these are called "fixed expenses") on capital investments in facilities such as hatcheries and fish passage at dams (\$87.5 million); forgone hydropower revenues that result from dam operations that benefit fish and reduce hydropower generation (\$397.4 million); and power purchases to replace the forgone hydropower (\$168.2 million). Tables 2-4 of this report detail Bonneville's direct spending on the Council's program in Fiscal Year 2006. The Columbia Basin Fish and Wildlife Authority (CBFWA) also reports on Bonneville's fish and wildlife expenditures. That report, *Status of Fish and Wildlife Resources in the Columbia River Basin*, is available on the CBFWA website, www.cbfwa.org.

The 2006 expenditures bring the grand total of Bonneville's fish and wildlife spending, from 1978 when the expenses began, through 2006, to \$8,662,800,000. Here, in descending order, is a breakdown of the expenditures, 1978-2006, which are detailed in Table 1 of this report:

- \$2.90 billion for power purchases to meet load requirements in response to required river operations that reduce hydropower generation.²
- \$1.78 billion in forgone revenue, the calculated value of hydropower that could not be generated because of required river operations to assist fish passage and improve fish survival, such as water spills at the dams when salmon and steelhead are migrating to or from the ocean.
- \$1.71 billion for the Council's direct-program. As noted above, the direct-program expenditures do not include annual expenditures from the separate capital-investment budget. With capital expenditures added, the total for 1978-2006 is \$3.97 billion¹.
- \$1.38 billion in fixed expenses for bonds issued by Bonneville to pay for capital investments in fish-passage facilities at the dams.
- \$862.2 million to reimburse the U.S. Treasury for the power-generation share of other federal agency expenditures to mitigate the impact of hydropower on fish and wildlife. Primarily these reimbursements are paid to the U.S. Army Corps of Engineers, Bureau of Reclamation, and U.S. Fish and Wildlife Service for efforts to improve fish and wildlife survival apart from the Council's program, such as operation and maintenance of fish passage facilities and federal fish hatcheries.

The Council thanks the Bonneville Power Administration for providing information about the agency's fish and wildlife expenditures for this report.

1 For the period 2001-2004, direct program expenditures included a total of \$16,000,000 in one-time expenditures for "high priority" and "action plan" projects. These are included in the calculation of 1978-2006 total spending. The high-priority projects were intended to bring immediate benefits to all species listed for protection under the Endangered Species Act in advance of subbasin planning (subbasin plans were submitted to the Council in 2004 and adopted into the fish and wildlife program in 2004 and 2005). The "action plan" projects were intended to bring immediate benefits to ESA-listed salmon and steelhead that were affected by altered hydropower dam operations in the spring and early summer of 2001, when the flow of the Columbia River was at a near-record low.

2 \$1.38 billion of this total was spent in the drought year of 2001.

Background

The 2007 Report

This is the sixth in a series of annual reports the Council prepares to explain funding of the Columbia River Basin Fish and Wildlife Program. The reports respond to a July 1999 request by the governors of Idaho, Oregon, Montana, and Washington -- the four states represented on the Council -- to report annually on expenditures of the Bonneville Power Administration to implement the program.

In this sixth annual report, the Council provides an update of Bonneville's funding through Fiscal Year 2006. The report also includes information about salmon and steelhead in the Columbia River Basin. Financial information was provided by Bonneville in response to requests from the Council. Information about salmon and steelhead was compiled from reports by the Fish Passage Center, U.S. Army Corps of Engineers, NOAA Fisheries, the states of Washington and Oregon through the Columbia River Compact, and the University of Washington Joint Institute for the Study of the Atmosphere and Oceans.

The Northwest Power and Conservation Council

The Northwest Power Act of 1980, a federal law, authorized the states of Idaho, Montana, Oregon, and Washington to form the Northwest Power and Conservation Council (it was known until 2003 as the Northwest Power Planning Council). The Act directs the Council to prepare a program to protect, mitigate and enhance fish and wildlife of the Columbia River Basin that have been affected by hydropower. The Act also directs the Administrator of the Bonneville Power Administration, the federal agency that sells electricity

generated at federal dams in the Columbia River Basin, to use the Bonneville fund in a manner consistent with the Council's program to protect, mitigate and enhance fish and wildlife affected by hydropower in the Columbia River Basin.

The Columbia River Basin Fish and Wildlife Program

The Council is a planning, policy-making, and reviewing body. Consistent with the Northwest Power Act, the Council develops the fish and wildlife program and monitors its implementation. The program is implemented primarily by Bonneville but also by the region's fish and wildlife agencies and tribes, the U.S. Army Corps of Engineers, the Bureau of Reclamation, and the Federal Energy Regulatory Commission and its licensees. The program addresses hydropower impacts on anadromous fish, resident fish, and wildlife. Anadromous fish are those that spawn in freshwater, migrate to the Columbia River estuary as juveniles, spend their adult lives in the Pacific Ocean, and then return to their freshwater birthplaces to spawn and die. Resident fish are those that live and migrate within freshwater rivers, streams, and lakes.

The program includes scientific research; habitat acquisitions and easements²; and construction projects to improve habitat and fish passage and to build and operate hatcheries. The program also establishes certain reservoir elevations and flow requirements to protect anadromous and resident fish and their habitat. Other measures call for using stored water to maintain appropriate water temperatures and protect streambeds. The program focuses most of the mitigation activities on anadromous fish, consistent with language in the Northwest Power Act. Section 2.6 of the Act states that anadromous fish "are of significant

² Habitat acquisitions and easements for wildlife are credited against identified habitat losses attributable to the construction of hydropower dams. The crediting unit is called a "Habitat Unit," which is a measure of both the quantity and quality of the acquired site and, thus, its suitability for targeted species. Habitat acquisitions and easements for resident fish in Montana are credited instream to mitigate losses attributable to the construction and inundation by Libby and Hungry Horse dams.

importance to the social and economic well-being of the Pacific Northwest and the Nation” and that these fish “are dependent on suitable environmental conditions substantially obtainable from the management and operation” of dams on the Columbia River and its tributaries. Primarily these are salmon and steelhead, but anadromous Pacific lamprey and sturgeon also are found in the Columbia system. These species also are targeted in the Council’s program.

Through a collaborative process, the Council and Bonneville solicit projects to implement the program. The Council submits project proposals for review by the fish and wildlife managers, the Independent Scientific Review Panel (ISRP)³ and the general public and then recommends projects to Bonneville for funding. The Council also requests NOAA Fisheries and the U.S. Fish and Wildlife Service to provide input on projects required to meet the agencies’ Endangered Species Act obligations for threatened and endangered fish species.

Beginning in Fiscal Year 2007, projects that implement the program are based on needs identified in subbasin plans and funded for three years at a time rather than one year. There are 57 subbasin plans, developed locally over a two-year period (2002-2004). The Council amended the plans into the fish and wildlife program in late 2004 and early 2005.

³ The Independent Scientific Review Panel was created by the Council in response to a 1996 amendment to the Northwest Power Act that called for greater scientific scrutiny and public accountability of expenditures through the Council’s program. The 11 members of the Panel are recommended by the National Academy of Sciences and appointed by the Council.

Expenditures by Category, Fiscal Years 2004 and 2005

Direct-program expenditures

Direct-program expenditures pay for projects reviewed by the ISRP, fish and wildlife managers and the public, and then recommended by the Council to Bonneville for funding. For Fiscal Year 2006, Bonneville reported direct-program expenditures of \$173.2 million. Those amounts include capital obligations of \$35.4 million. Subtracting capital obligations, the expenditures total \$137.9 million.

In 2006, Bonneville's spending for anadromous fish totaled \$106.6 million. For resident fish, the amount was \$25.6 million. For wildlife, the amount was \$26.8 million. Expenditures for anadromous fish projects amounted to 61.5 percent of direct-program spending. Resident fish projects accounted for 14.7 percent of direct-program spending, and wildlife expenditures accounted for 15.4 percent⁴.

Bonneville reported systemwide fish and wildlife program support expenditures of \$3.2 million in 2006. These include costs such as data management, coordination and information to support all programs. Bonneville program support, \$10.9 million in 2006, includes contracts for program review and independent analysis of the program, and for Bonneville's Environment, Fish, and Wildlife Division overhead and personnel costs.

Power purchases

Measures in the Council's program and in the 2000 and 2004 biological opinions on hydropower operations issued by NOAA Fisheries and the U.S. Fish and Wildlife Service can affect hydropower generation (a new biological opinion, resulting from a court-ordered remand of the 2004 opinion, is due in 2007). These

measures include river and dam operations to protect spawning and rearing areas for resident fish such as bull trout and white sturgeon and to improve passage conditions at dams for listed juvenile salmon and steelhead. To make up lost hydropower generation when these operations occur, Bonneville often buys electricity from other suppliers. These purchases are part of Bonneville's larger wholesale power purchases. To determine how much of these purchases to attribute to lost hydropower from the fish operations, Bonneville performs two annual calculations of its total power purchases -- one that includes the fish operations and one that does not. Bonneville attributes the difference in power purchases to the fish requirements and, therefore, identifies them as a cost in its fish and wildlife budget. Bonneville assigned \$168.2 million in power purchases to the fish and wildlife budget in 2006.

Forgone revenue

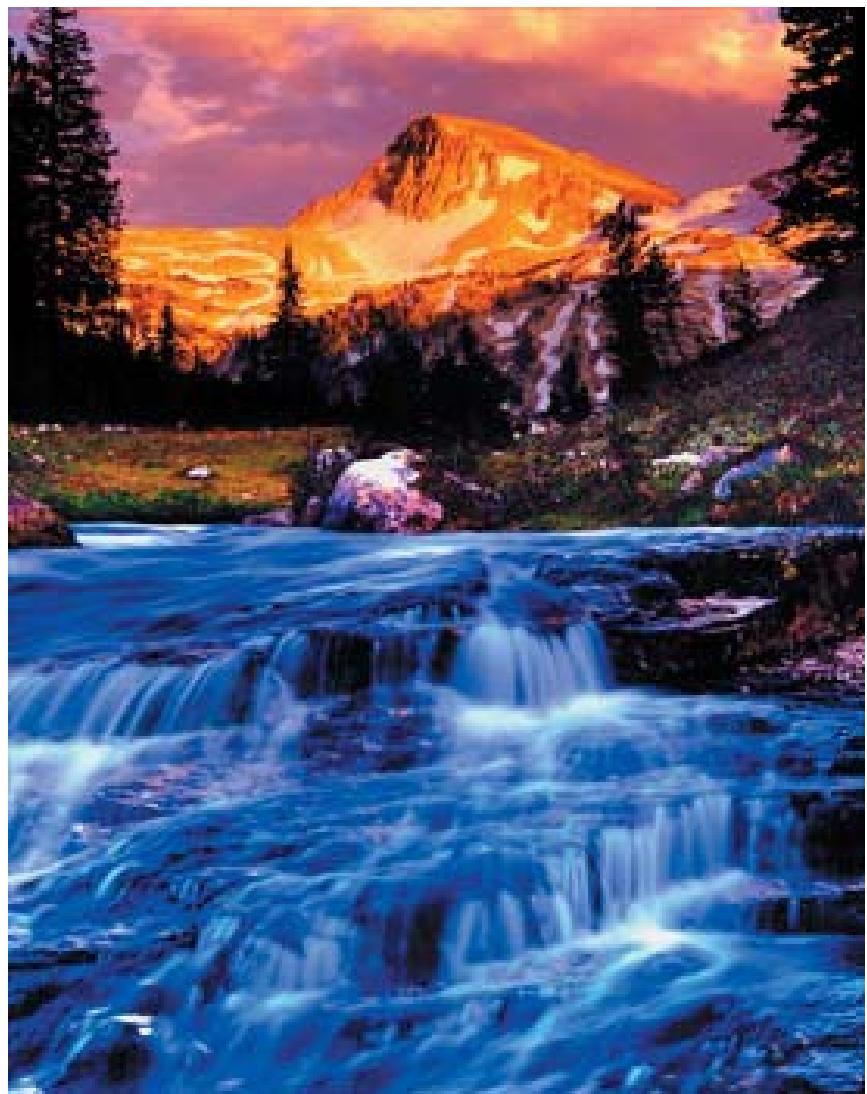

River and dam operations can result in lost income, and in some circumstances increased income, for Bonneville. Bonneville's budget term for the lost income is forgone revenue. To determine forgone revenue, Bonneville calculates the net value of the hydropower revenues gained and lost as a result of fish operations on an annual basis. Bonneville charges forgone revenue against its fish and wildlife budget as an expense. Bonneville assigned forgone revenue of \$397.4 million to the fish and wildlife budget in 2006.

⁴ Wildlife expenditures are treated differently than expenditures for anadromous fish and resident fish. Wildlife projects address habitat losses that have been calculated, by species, for each federal dam (or groups of dams within tributary subbasins). The identified losses only address the impacts of dam construction; losses attributable to dam operations have not been quantified. The Council, Bonneville, and the region's wildlife managers developed a system of crediting habitat acquisitions against the losses.

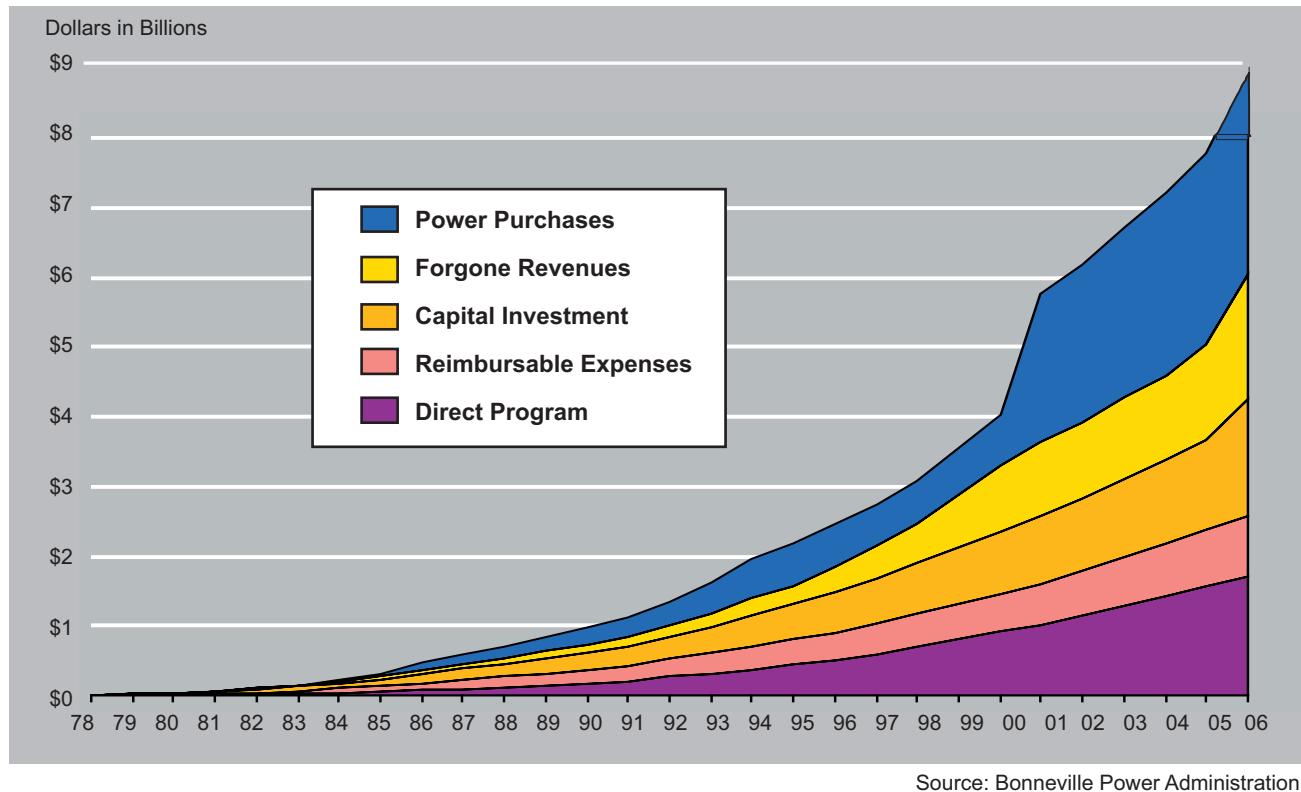

Fish Runs and Fisheries

This report also includes the most recent numbers the Council could gather about salmon and steelhead runs in the Columbia River Basin. The Council collected the information from reports prepared by the Washington and Oregon departments of fish and wildlife, NOAA Fisheries, the U.S. Army Corps of Engineers, and the Fish Passage Center.

Some of the figures and tables are presented differently in this version of the report than in past versions, reflecting changes in how the state and federal agencies compile and report the information. Additionally, some information that was reported in past versions of this report no longer is available.

Ocean Temperature Cycle, January 1900 to February 2007

Source: Joint Institute for the Study of the Atmosphere and Ocean, University of Washington. According to researchers at the University of Washington, the "Pacific Decadal Oscillation" (PDO) depicted in this figure is a long-lived El Niño-like pattern of Pacific Ocean climate variability. The PDO is different from El Niño in two important ways. First, the 20th century PDO "events" persisted for 20-30 years, while typical El Niño events persisted for six to 18 months. Second, the PDO appears to affect primarily the northern Pacific Ocean, while El Niño appears to affect primarily the southern Pacific. Major changes in northeast Pacific marine ecosystems have been correlated with phase changes in the PDO; warm eras have seen enhanced biological productivity in waters off the coast of Alaska and inhibited productivity off the west coast of the contiguous United States, while cold PDO eras have seen the opposite north-south pattern of marine ecosystem productivity.

Table 6 Salmon and Steelhead Passing Bonneville Dam, 1938 - 2006

These dam counts can not be used for year-to-year comparison of abundance or population size without evaluating and quantifying the effects of hatchery production facility modifications, dam operations, dam modifications, upstream development, fisheries, counting schedules, counting techniques, between-dam counting discrepancies, counting-station modification, fishway modifications, fallback and dam-passage efficiencies.

Yearly totals of all fish passing Bonneville Dam 1938 - 1976
