## NORTHWEST POWER AND CONSERVATION COUNCIL

### ***DRAFT*** **CHARTER OF THE OCEAN AND PLUME SCIENCE AND MANAGEMENT FORUM**

1. Official Designation: This Forum will be known as the Northwest Power and Conservation Council's Ocean and Plume Science and Management Forum.
2. Background: In 2010 the Council reviewed all Research, Monitoring and Evaluation projects, and requested that an Ocean Synthesis Report be developed by three ocean project sponsors. After ISRP review of this report the Council decided to re-focus the ocean research program and hosted an [Ocean and Plume Workshop](#) to explore future opportunities for research. This workshop was successful at providing a forum for ocean researchers and in-river managers to identify critical uncertainties and potential management applications. To continue regional coordination on ocean research the Council's Fish and Wildlife Committee requested the development of an Ocean and Plume Science and Management Forum (Forum) charter.

The Council's Fish and Wildlife Program acknowledges that the ocean, plume and estuary are integral components of the Columbia River ecosystem and the lifecycle of Columbia River salmon. The 2009 Fish and Wildlife Program states the following primary ocean strategy: "*Identify the effect of ocean conditions on anadromous fish survival and use this information to evaluate and adjust inland actions* (pg. 31)." With this strategy in mind, the goal of this Forum is to engage researchers and fisheries managers in a process of identifying a) the management implications of ocean research and b) priorities for future ocean research. The Forum is expected to produce a list of priority critical uncertainties with clear and measurable hypotheses which can be reflected in the Council's Research plan and considered for funding by Bonneville.

This advisory committee is established as part of a network of advisory committees satisfying the Council's obligation under the Act to establish a Scientific and Statistical Advisory Committee. Section 4(c)(11). Under Section 4(a)(4) of the Act, the terms of the Federal Advisory Committee Act, 5 U.S.C. Appendix I, Sections 1-14, apply "to the extent appropriate" to the Council's advisory committees.

3. Objectives and Scope of Activity: The Forum will assist and advise the Council by completing the following tasks:

- (A) Identify key information needs. These needs may be revisited and refined over time, and may include a balance of ocean-related research, monitoring and evaluation tasks.
    - a. Compile, identify and/or develop management questions related to the implementation of the NW Power Act and the Council's Fish and Wildlife Program.
    - b. Identify what research and monitoring has already been done that address the management questions, and what is being done now.
  
  - (B) Identify the critical uncertainties that must be addressed to answer management questions.
    - a. Identify studies to address key uncertainties related to management questions (including duration of study).
    - b. Identify any gaps in studies to address management questions.
    - c. Develop and recommend to the Council a prioritized list of studies to address the management questions to inform future needs. The forum will identify an explicit process to achieve this task.
  
  - (C) Identify and provide opportunities for information sharing between ocean and plume researchers and estuary and freshwater managers.
    - a. Identify opportunities to disseminate and integrate ocean research information within existing management forums and information channels
    - b. Develop an integrated, multidisciplinary team approach, include opportunities for multidisciplinary analyses.
  
  - (D) Identify management applications of ocean and plume information, including existing and yet to be collected information. This should include harvest impacts on the Columbia River Basin ecosystem.
    - a. Make recommendations to the Council on ways to improve the utility and in-river freshwater resource management benefits of both ongoing and proposed ocean and plume research conducted under the Program.
    - b. Prepare a final report summarizing the recommendations and accomplishments of the forum. This report will be prepared by Council staff and provided to the Council.
4. Official to Whom the Ocean and Plume Science and Management Forum Reports: The Ocean and Plume Science and Management Forum will report to the Executive Director of the Council.
  5. Authority of the Forum: The Forum will serve in an advisory capacity only. Neither the Forum nor its members are authorized to make statements or commitments on behalf of the Council. Non-staff members of the Committee are not Council employees.
  6. Estimated Annual Operating Costs in Dollars and Person-Days: Three months of staff time per year to organize and attend Forum meetings.
  7. Forum Members: The Chair of the Forum, in consultation with the Director of the Fish and Wildlife Division, will solicit technical experts to participate on the advisory committee from a wide range of regional stakeholders. The Council's Executive Director

shall approve the participants and, in doing so, shall ensure that membership of the advisory committee is fairly balanced in terms of the points of view represented and the functions to be performed by the advisory committee. Committee members shall be selected based primarily on their technical and policy expertise and experience. Members may include representatives of state and federal fish and wildlife agencies, tribes, Bonneville, customer representatives, universities, public interest groups, and the general public. All Committee members serve at the pleasure of the Council.

8. Forum Management Officer: The Forum Management Officer ("Management Officer") for the Ocean Plume Science and Management Forum will be the Director of the Council's Division of Fish and Wildlife. The Management Officer will designate members of the Council's staff to coordinate and attend meetings of the Forum.
9. Chair:
  - (A) The Chair of the Council will select the Chair of the Ocean Plume Science and Management Forum from among the members of the Council's Fish and Wildlife Committee.
  - (B) The Forum Chair may be called upon to report to the Executive Director of the Council on appropriate matters, including progress on the tasks described in Part 3 of this Charter.
  - (C) The duties of the Forum Chair will include presiding over the Forum meetings, ensuring that detailed minutes of such meetings are prepared and submitted to the Executive Director of the Council in a timely manner, and maintaining communication between the Forum and the Council's staff.
  - (D) The Forum Chair will certify detailed minutes of meetings of the Forum. The minutes should include a complete and accurate description of matters discussed, conclusions reached, actions taken, persons invited to meet with the Forum, and persons in attendance. The minutes also will include copies of reports received, issued or approved by the Committee. Minutes of meetings will be prepared and released within ten days of the meeting, unless the Management Officer grants an extension. The Chair will distribute copies of the minutes to members of the Committee and other interested persons.
  - (E) Subcommittees or small workgroups of the Forum may be established by the Chair of the Forum to undertake particular aspects of the Forum's work. Methods for organizing the work and procedures of the Forum must follow the scope of responsibilities assigned to the Forum by the Council. Council staff will make arrangements for Forum meetings and provide general support services.
10. Vice-Chair:
  - (A) Vice-Chair of the Ocean and Plume Research and Management Forum will be selected by the Forum members.
  - (B) The Vice-Chair will perform the duties of the Chair of the Forum in the absence of

that Chair, and such other duties as the Chair of the Forum may assign.

11. Rules: The Advisory Committee rules approved and adopted by the Council on March 17, 1982, as amended from time to time, will apply to the Ocean and Plume Research and Management Forum to the extent such matters are not covered in this Charter.

Estimated Frequency of Forum Meetings: The Chair of the Forum, after consultation with the Management Officer, or his designee, will call meetings as necessary. The estimated frequency of meetings is quarterly. More frequent meetings may be required initially.

12. All meetings will be open to the public, unless closed pursuant to 5 U.S.C. 552b(c). Timely notice of meetings, including agendas, will be made. Interested persons may attend Forum meetings and appear before or file statements with the Forum, subject to such reasonable rules as the Council may prescribe.
13. Duration: The Forum will terminate two years from the filing date of this Charter, unless renewed in accordance with the Federal Advisory Committee Act. All Members of the Forum serve at the pleasure of the Council.

This Charter for the Ocean and Plume Research and Management Forum was approved and adopted at a duly noticed meeting of the Northwest Power and Conservation Council, \_\_\_\_\_ (date) \_\_\_\_\_ in \_\_\_\_\_ (location) \_\_\_\_\_.

PACIFIC NORTHWEST ELECTRIC POWER  
AND CONSERVATION PLANNING COUNCIL

By: \_\_\_\_\_  
Bill Bradbury, Chair

**Appendix 1. Uncertainties and questions (source: February 14, 2013 Ocean and Plume Workshop):**

**PLUME/ OCEAN CONDITIONS AND FOOD WEBS**

- Are there predictable patterns in forage fish abundance in the plume?
- Can food abundance in the plume be measured? Is food abundance an issue for wild salmonids?
- Why do some juvenile salmonid species spend longer times in the plume while others move quicker north? Is fish health a factor in this?
- Can we predict the year-to-year variations in conditions? Seasonal ocean/plume/estuary conditions? And their impacts on fish?
- What are the major predators in the ocean? What are the major predators in the plume? How do these vary by species? What are predation rates in the plume/ocean?
- Where and when does density dependence occur? Could hatchery releases be adjusted to consider poor ocean years, predator migratory patterns, etc?
- Does density dependence within and between populations interact?
- Can we measure carrying capacity in the ocean? Is it an issue for wild salmonids?
- What is the role of the ocean in population dynamics?

**HATCHERY/ MAINSTEM/ RELEASE TIME**

- Does hatchery fish diet have an effect on in-river and ocean survival?
- How good are hatchery fish as a proxy for wild fish?
- What are the on-site and off site effects on the condition of fish as they exit the river and enter the ocean? How does this compare to data on survival in the first year?
- How can release times, transport times be optimized to benefit juvenile salmonids?
- What are the mechanisms of survival?
- How might alternative storage and flow release schedules impact fish?
- How critical is large woody debris to salmon in the mainstem?
- Are hatchery fish having an impact on wild fish in the plume/ocean?

**CLIMATE CHANGE IMPACTS ON OCEAN CONDITIONS**

- How will ocean conditions such as acidification, hypoxia impact the survival of salmonids and salmon food sources?
- How do salmon but also other anadromous species function in changing ocean conditions?
- How does hypoxia impact the migratory patterns of salmon and their predator and prey species?
- Are the impacts of hypoxia and acidification just as prevalent in the plume?
- Why does upwelling not work anymore?
- Are there things we can be doing to alter or mitigate for acidification/ hypoxia? Can we predict the rate of progress of these climate related ocean issues?
- How can we offset the impacts of climate change?

**QUESTIONS FOR MANAGERS:**

- If we had information on ocean conditions in real time, how would we change our management methodologies?
- How are we going to translate science into a practical tool for management?
- For every fish benefit and potential management application, how do we evaluate risk of changing the current methodology?

- How can we shift management to focus at the ecosystem scale? While also looking at individual species and population variations?
- How much leeway do managers need to shift their management methodologies? And can scientists turn around ocean condition data to fit this need?

## DECISION MEMORANDUM

**TO:** Council members

**FROM:** Patty O'Toole, Program Implementation Manager  
Jim Ruff, Manager, Mainstem Passage and River Operations

**SUBJECT:** Council decision on ocean forum charter

**PROPOSED ACTION:** Staff is forwarding the recommendation of the Fish and Wildlife Committee that the Council approve the charter for the Ocean and Plume Science and Management Forum.

### SIGNIFICANCE:

In 2010 the Council reviewed all Research, Monitoring and Evaluation projects, and requested that an Ocean Synthesis Report be developed by three ocean project sponsors. After ISRP review of this report the Council decided to re-focus the ocean research program and hosted an [Ocean and Plume Workshop](#) to explore future opportunities for research. This workshop was successful at providing a forum for ocean researchers and in-river managers to identify critical uncertainties and potential management applications. To continue regional coordination on ocean research the Council's Fish and Wildlife Committee requested the development of an Ocean and Plume Science and Management Forum (Forum) charter. The goal of this Forum is to engage researchers and fisheries managers in a process of identifying a) the management implications of ocean research and b) priorities for future ocean research. The Forum is expected to produce a list of priority critical uncertainties with clear and measureable hypotheses which can be reflected in the Council's Research plan and considered for funding by Bonneville.

### BUDGETARY/ECONOMIC IMPACTS

Staff estimates that the three months of staff time per year is needed to organize and attend Forum meetings.

### BACKGROUND AND ANALYSIS

On September 12, 1996, the first and only amendment to the Northwest Power Act of 1980 was enacted by Congress. This legislation instructed the Council to take certain steps regarding the prioritization of projects funded by the Bonneville Power Administration in response to the Council's Columbia River Basin Fish and Wildlife Program. In the new Section

(4)(h)(10)(D)(vi) of the Act, the Council was instructed to "consider the impact of ocean conditions on fish and wildlife populations" in making its recommendations to Bonneville regarding projects to be funded. Consideration of ocean conditions has its most direct impact on anadromous fish populations, such as salmon and steelhead.

Subsequently, in 1997 the Council developed and approved some basic principles and strategies to guide it when considering ocean impacts. These can be found in the Council's Fish and Wildlife Program today. The Council considers the ocean environment an integral component of the Columbia River ecosystem since salmon and steelhead spend a majority of their life cycle in the ocean environment. It was recognized that freshwater and marine environments are not independent from one another. Program strategies include:

1. Identify the effects of ocean conditions on anadromous fish survival and use this information to evaluate and adjust inland freshwater actions;
2. Manage for Ocean Variability; and
3. Distinguish Ocean Effects from Other Effects.

Also in 1997 the Council called for the first ocean-related project to assess the impact of the hydrosystem on the estuary and near-shore plume. The first project was funded by Bonneville in 1998.

In June 2011 the Council, in its Review of Research, Monitoring and Evaluation and Artificial Production Projects, called for the continued funding of two proposals<sup>1</sup> and the close out of an "innovative" (special project selection process for "innovative" proposals) project from 2002<sup>2</sup>. In addition, the Council called for the project sponsors to jointly complete a comprehensive synthesis report on ocean research which was produced and released in January 2012. The ISRP then reviewed the synthesis report at our direction, producing a review report in February. Both the synthesis report and the ISRP's review may be found at <http://www.nwcouncil.org/fw/isrp/isrp2012-3/>.

In April of 2012, the Council decided to support continuing ocean research, but also to work with sponsors, the Action Agencies, the state and tribal fisheries managers and others to use the synthesis report to refocus the research especially to: 1) improve the linkages to potential management applications and essential survival calculations; 2) consider an emphasis on monitoring efforts in the Columbia River plume, the near shore ocean and estuary areas; and 3) discuss the feasibility of collecting information on species, such as steelhead.

Implementation of ocean-related projects by Bonneville in recent years has ranged roughly from \$4.6 million in 2010 to \$1.07 million in 2013.

### **Recent Activities**

Since the Council's 2012 decision, Bonneville and NOAA Fisheries have been discussing priorities for RPA plume/ocean studies for 2014-2018 and expect to identify and describe these studies in the 2013 FCRPS Biological Opinion (BiOp). A draft of the BiOp is anticipated in August of 2013.

---

<sup>1</sup> Project # 1998-014-00, Ocean Survival of Salmonids (NOAA); and Project # 2003-009-00, Salmon Shelf Survival Study (DFO).

<sup>2</sup> Project # 2003-114-00, Coastal Ocean Acoustic Salmon Tracking, (Kintama Research).

To jump start an effort to refocus ocean and plume research per the Council's decision, the Council held a science-policy workshop on February 14, 2013. The workshop brought together ocean and plume researchers from the NOAA Science Center, the Canadian Department of Fisheries and Ocean, the University of Washington, Oregon State University, the Center for Coastal Margin Observation and Prediction and members of the Independent Scientific Advisory Board and inland fisheries managers to review recent findings by the researchers and to discuss potential management applications of the ocean/plume research findings. The objectives of this workshop were to:

- Prepare for the upcoming 2013-14 Columbia River Basin Fish and Wildlife Program
- Identify Fish and Wildlife Program priorities for ocean and plume research and reporting
- Integrate ocean science with natural resource management in the Columbia River

The 2013 workshop was well attended. Approximately 90 people participated either in person or via conference line. The workshop presentations and notes are posted on the Council's website. See <http://www.nwcouncil.org/fw/program/oceanplume/>.

It was clear from the discussion that there are two priority needs going forward, one being the need for a forum for ongoing dialogue between scientists and managers, and the second being a list of priority uncertainties to guide future ocean research efforts. The staff, with committee support, established a small steering committee to develop a draft forum Charter (attached).

## **ALTERNATIVES**

An alternative is to not approve a charter for an ocean forum and instead encourage continuing, less structured dialogue between ocean researchers and managers.
