Salmon & Steelhead Returns to the Bonneville Dam

Data from Fish Passage Center

Ocean conditions & salmon production

The 5 P's

- *PDO*

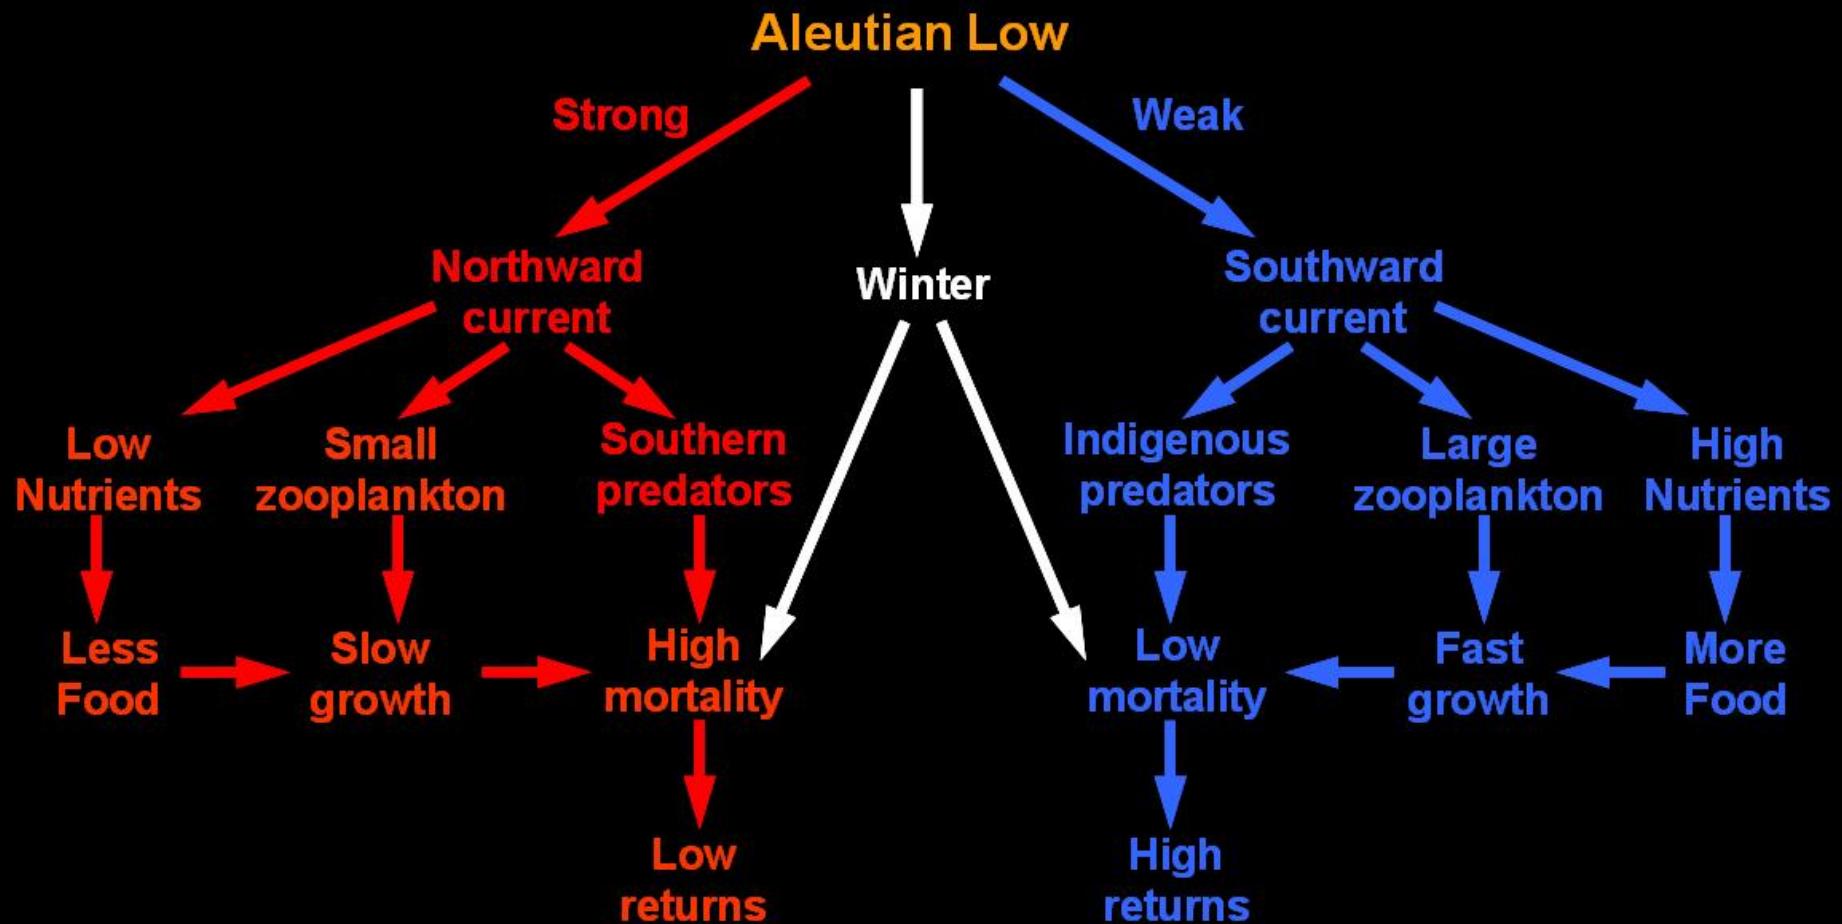

- *Productivity*

- *Prey*

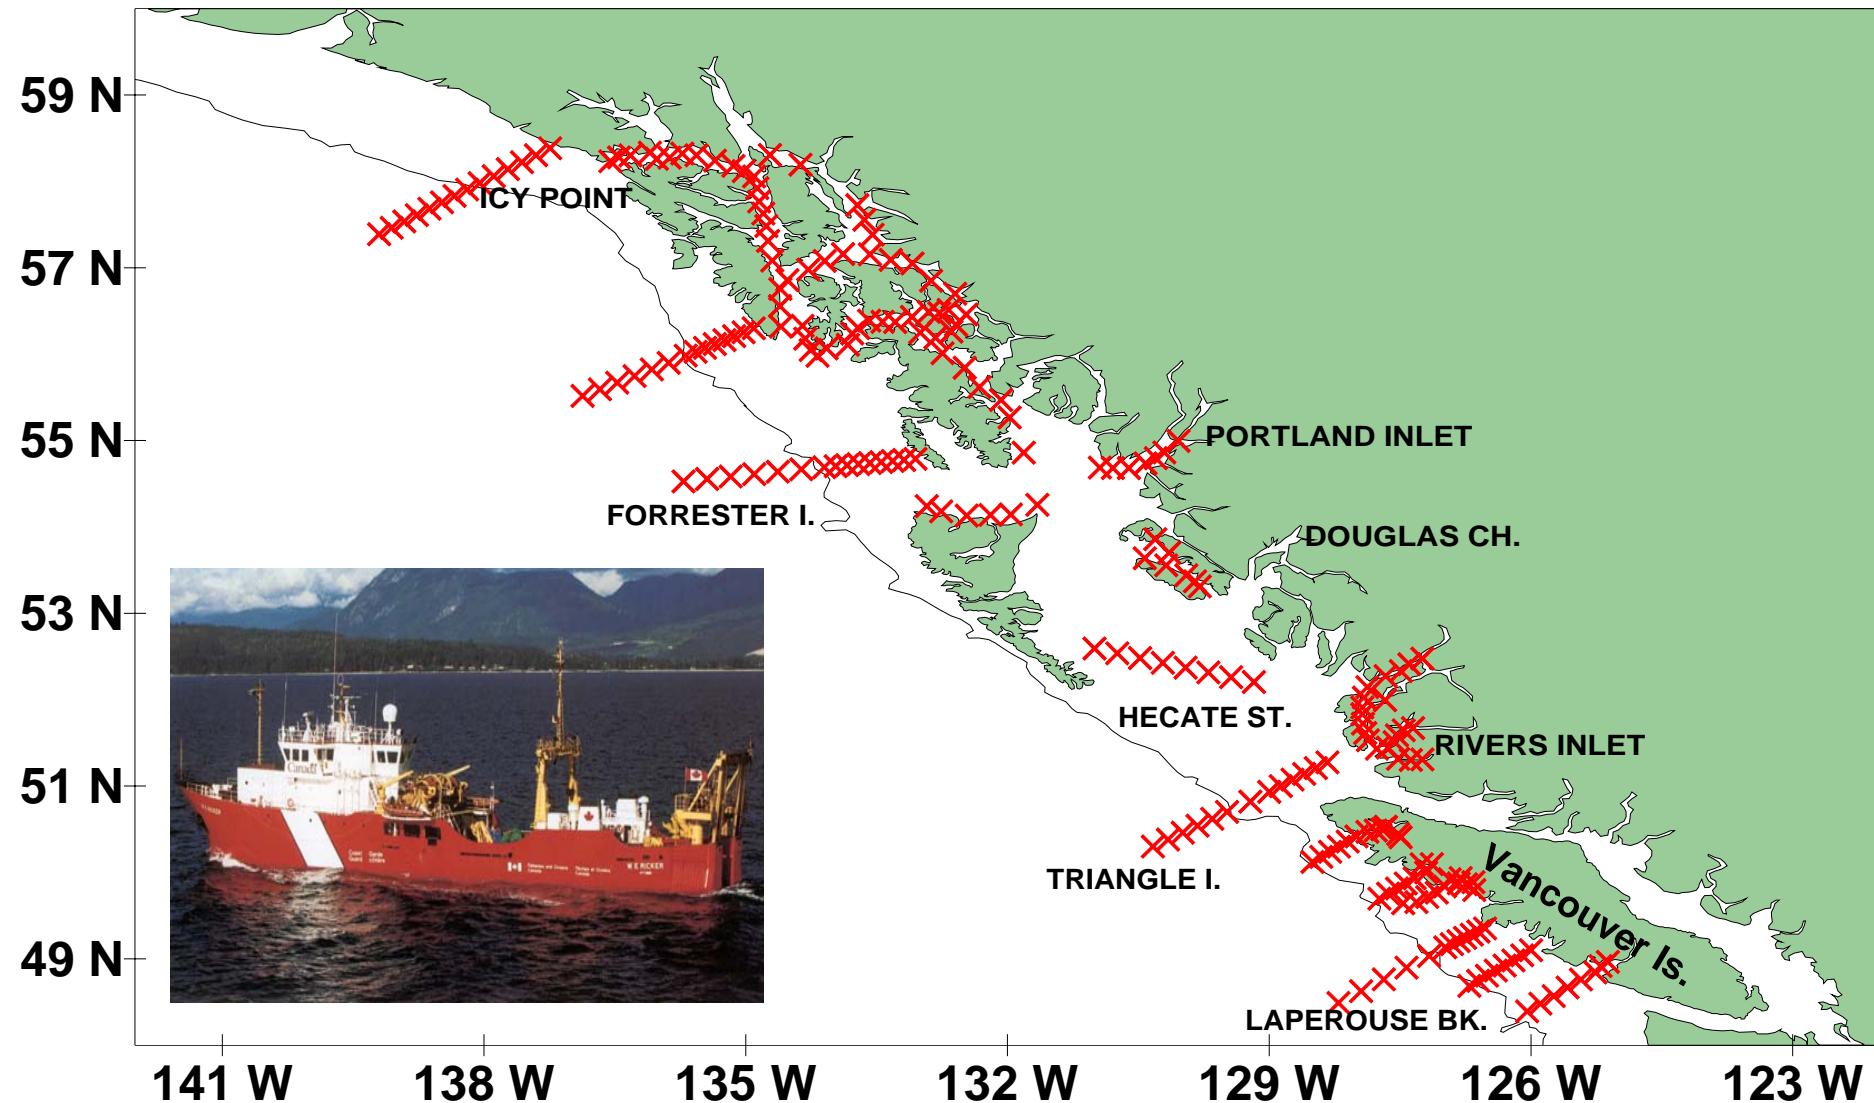

- *Predation*

- *Physiology*

Conceptual model

Juvenile Salmon Surveys (1998-2005)

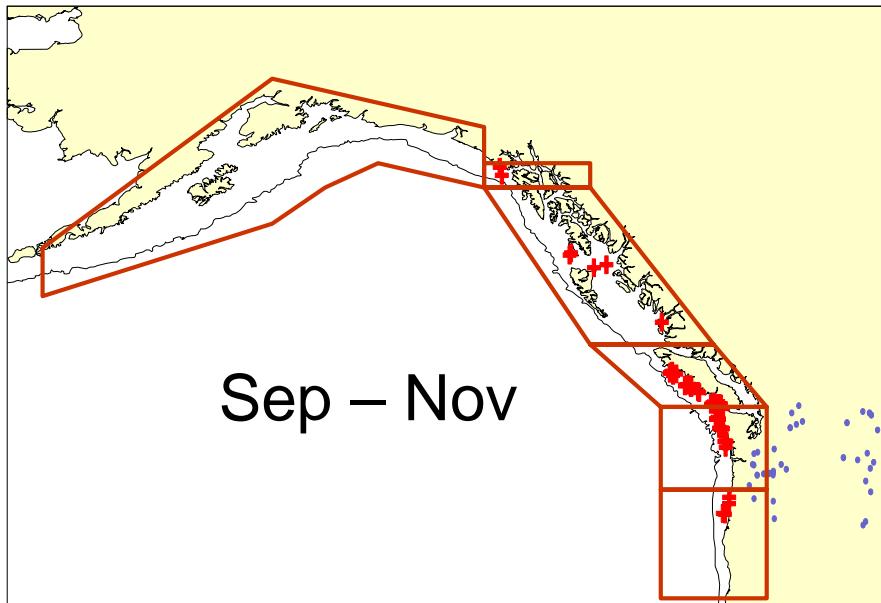

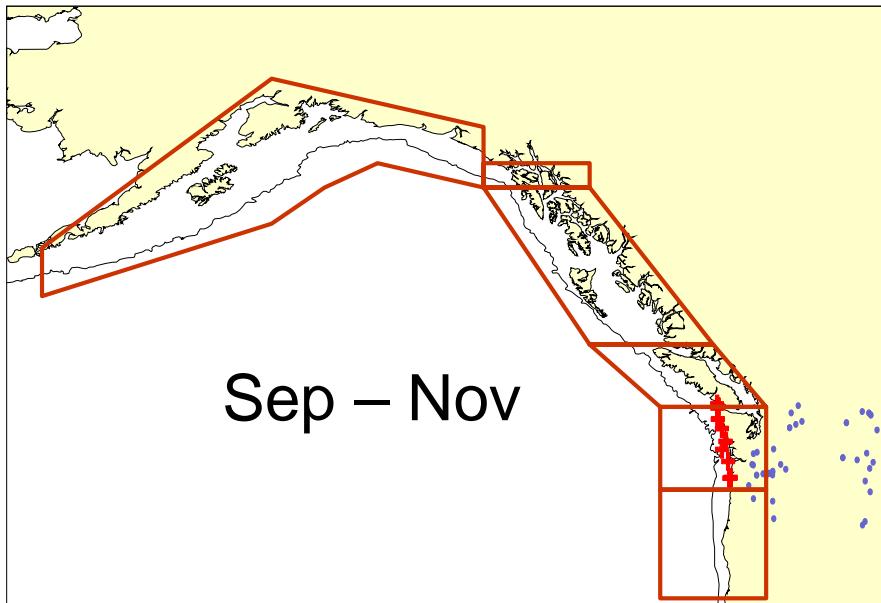

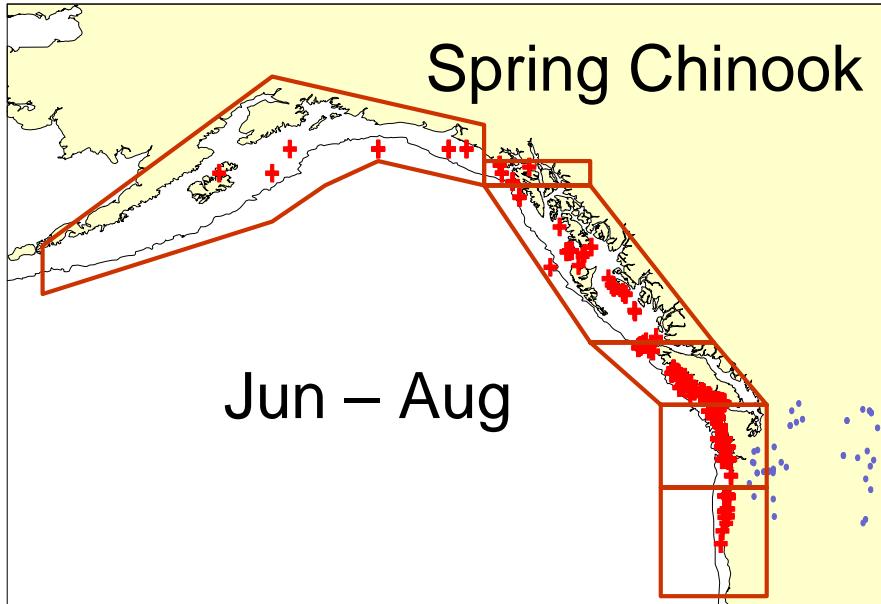

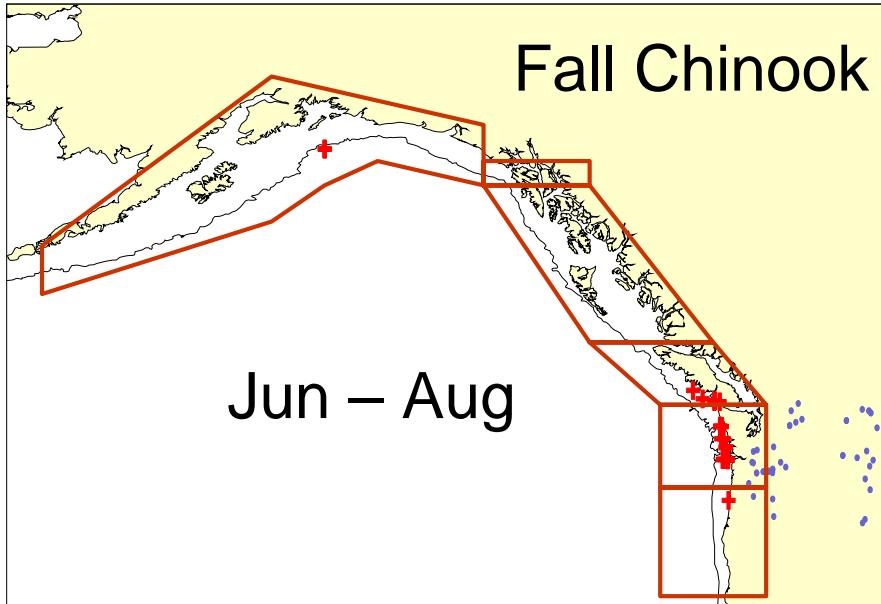

Research questions

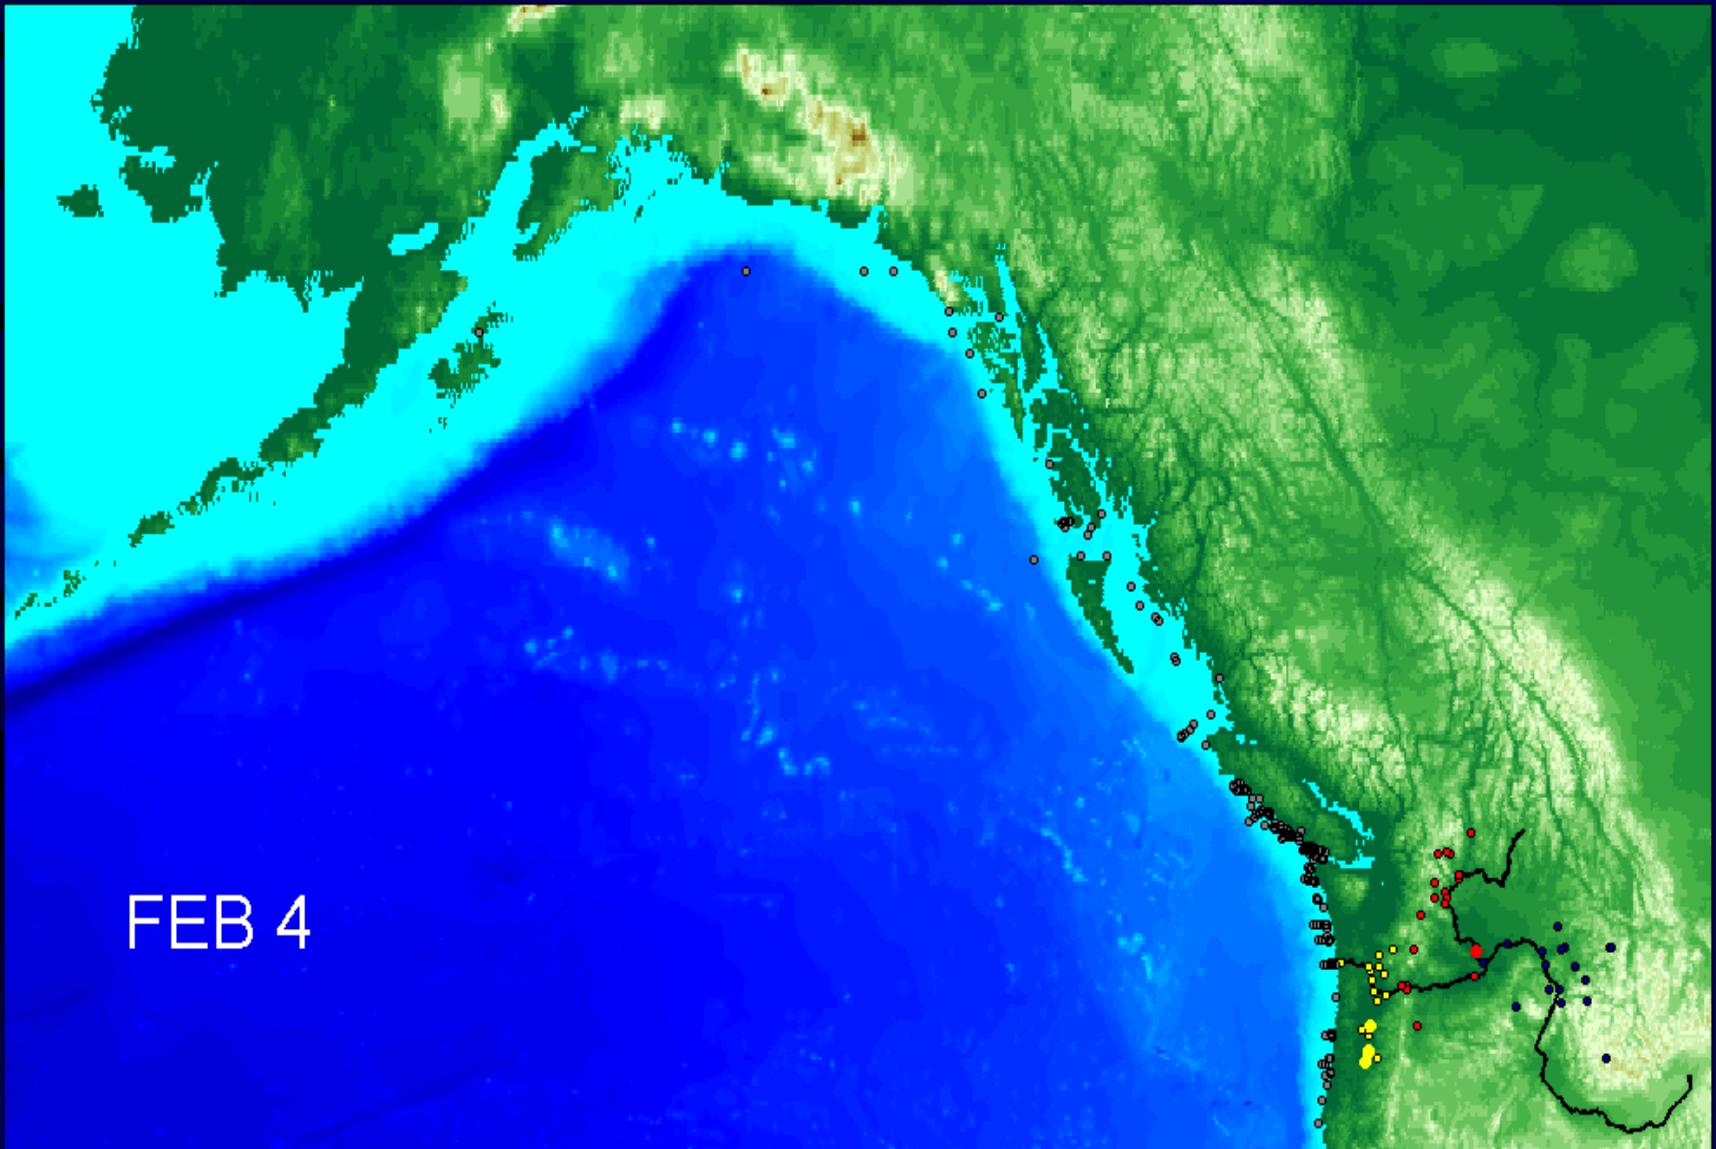

- *Where do salmon go?*
- *How much time do they spend in an area?*
- *What are the environmental conditions they encounter?*
- *How do ocean conditions affect salmon growth?*
- *How do ocean conditions affect salmon survival?*
- *Can we improve salmon forecast?*

Columbia River Salmon distribution & migration

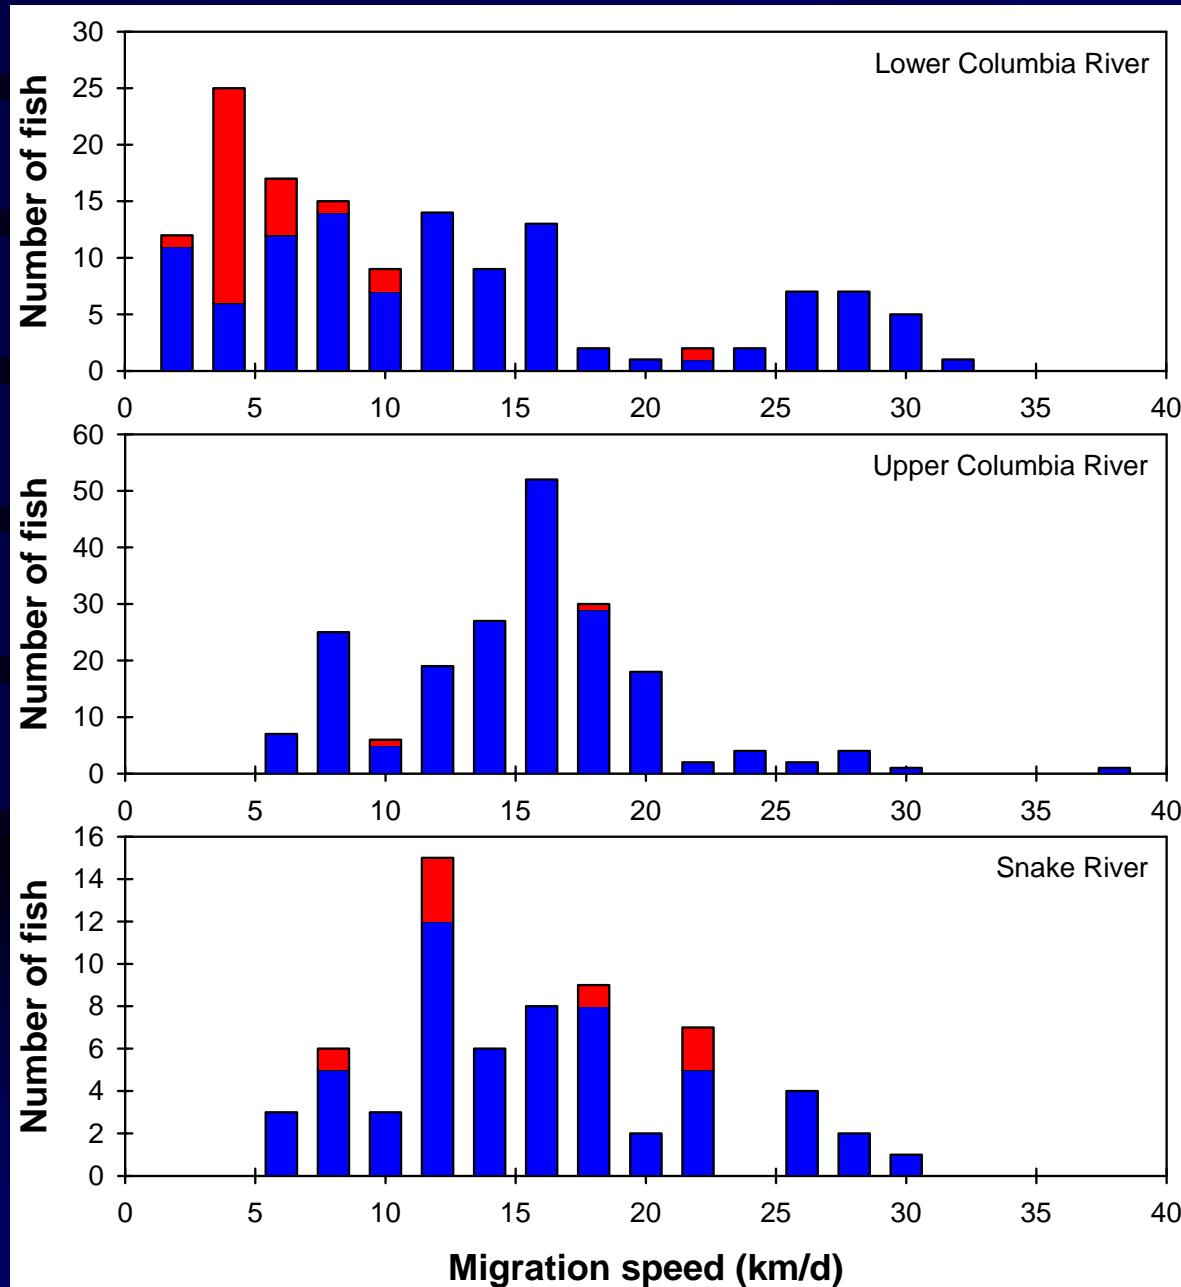

Juvenile Columbia-Snake River Chinook

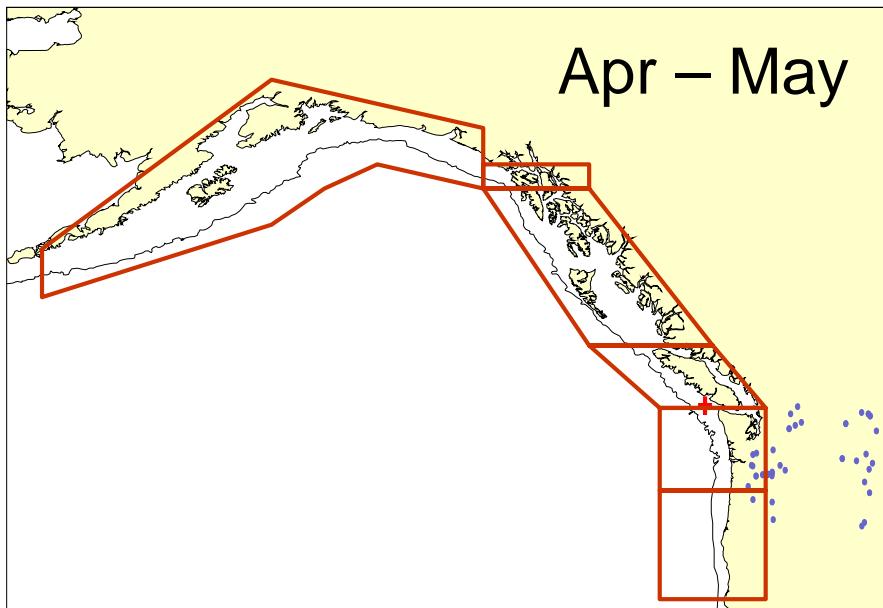

Juvenile CR Spring Chinook Migration

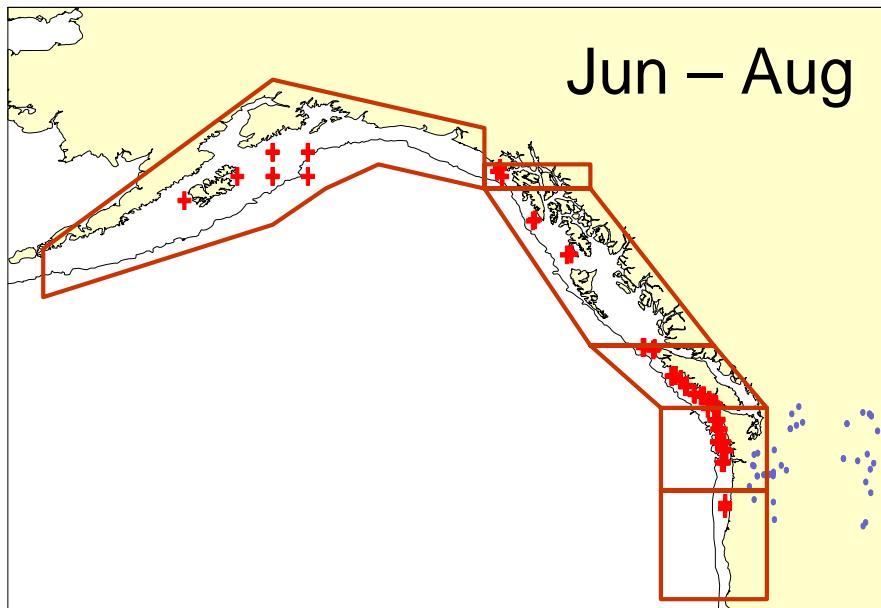

Spring Chinook Salmon Migration Speed

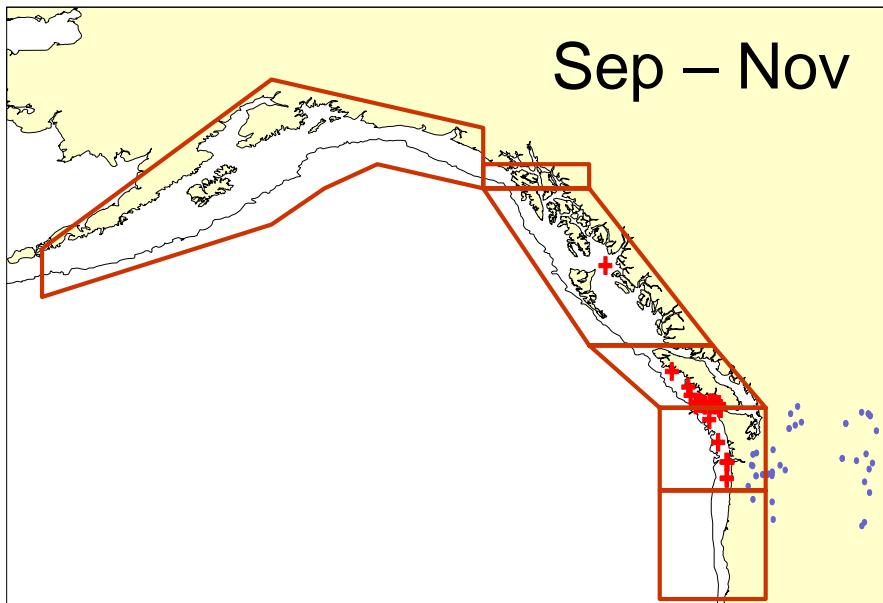

Columbia River Coho

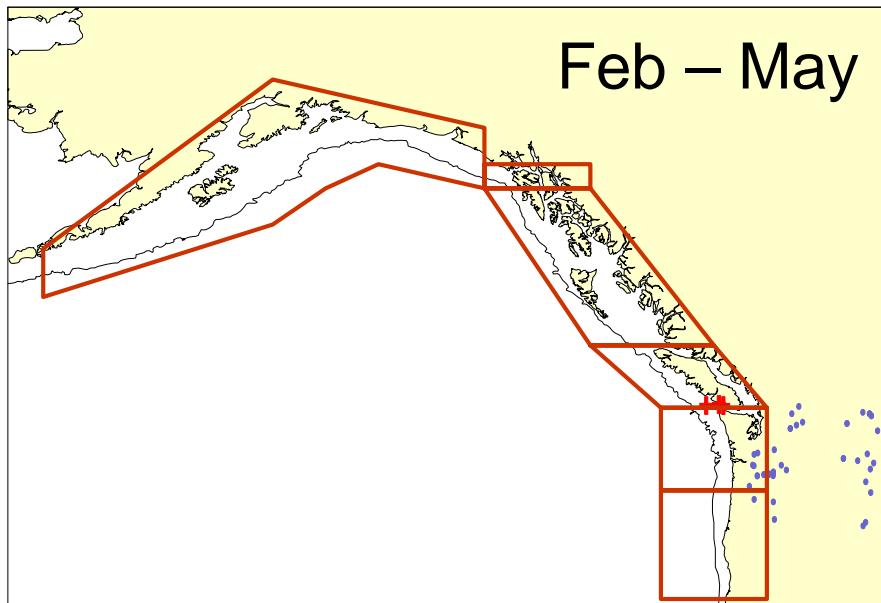

Apr – May

Jun – Aug

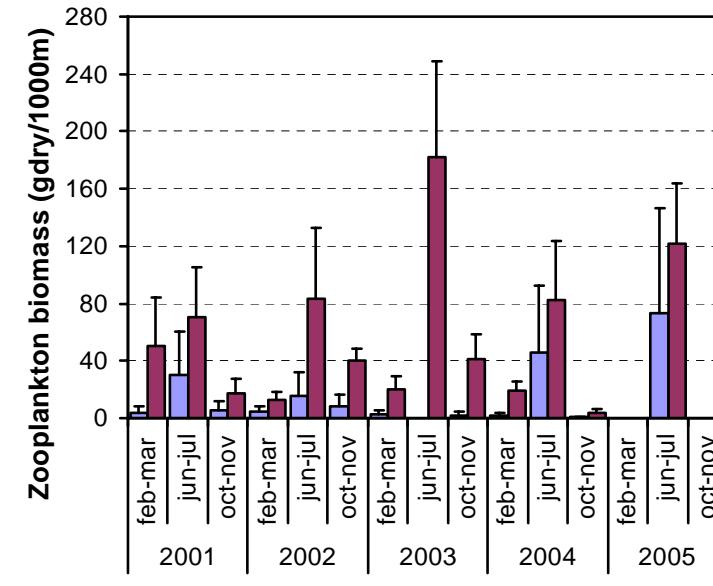

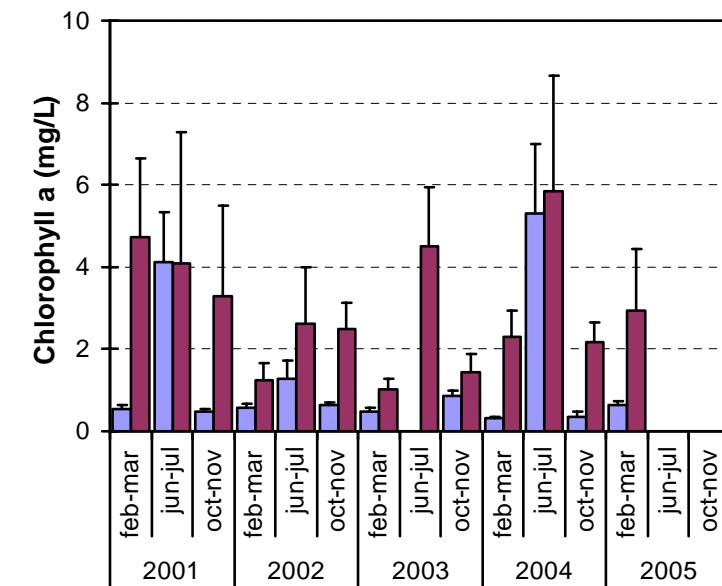

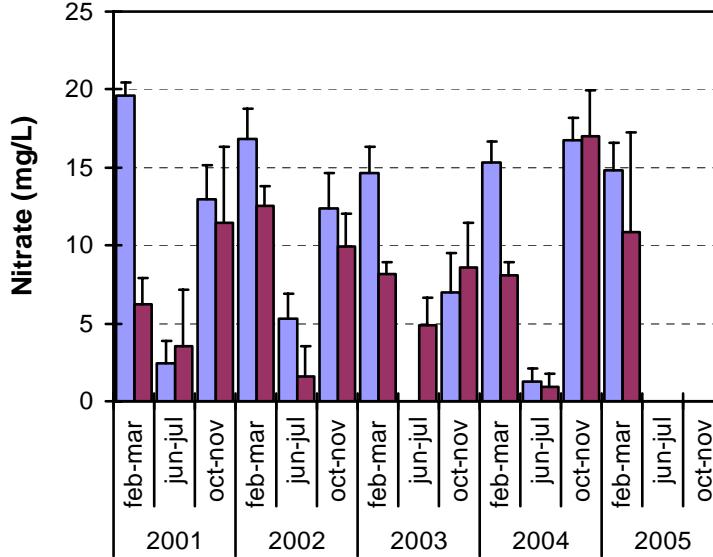

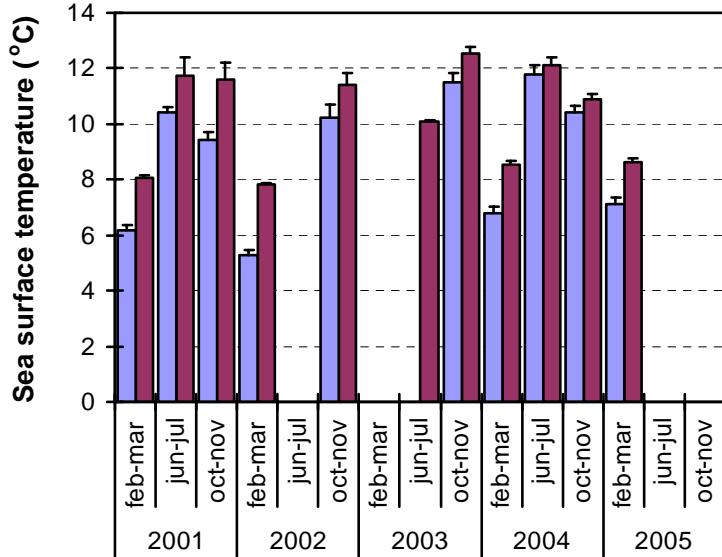

Sep – Nov

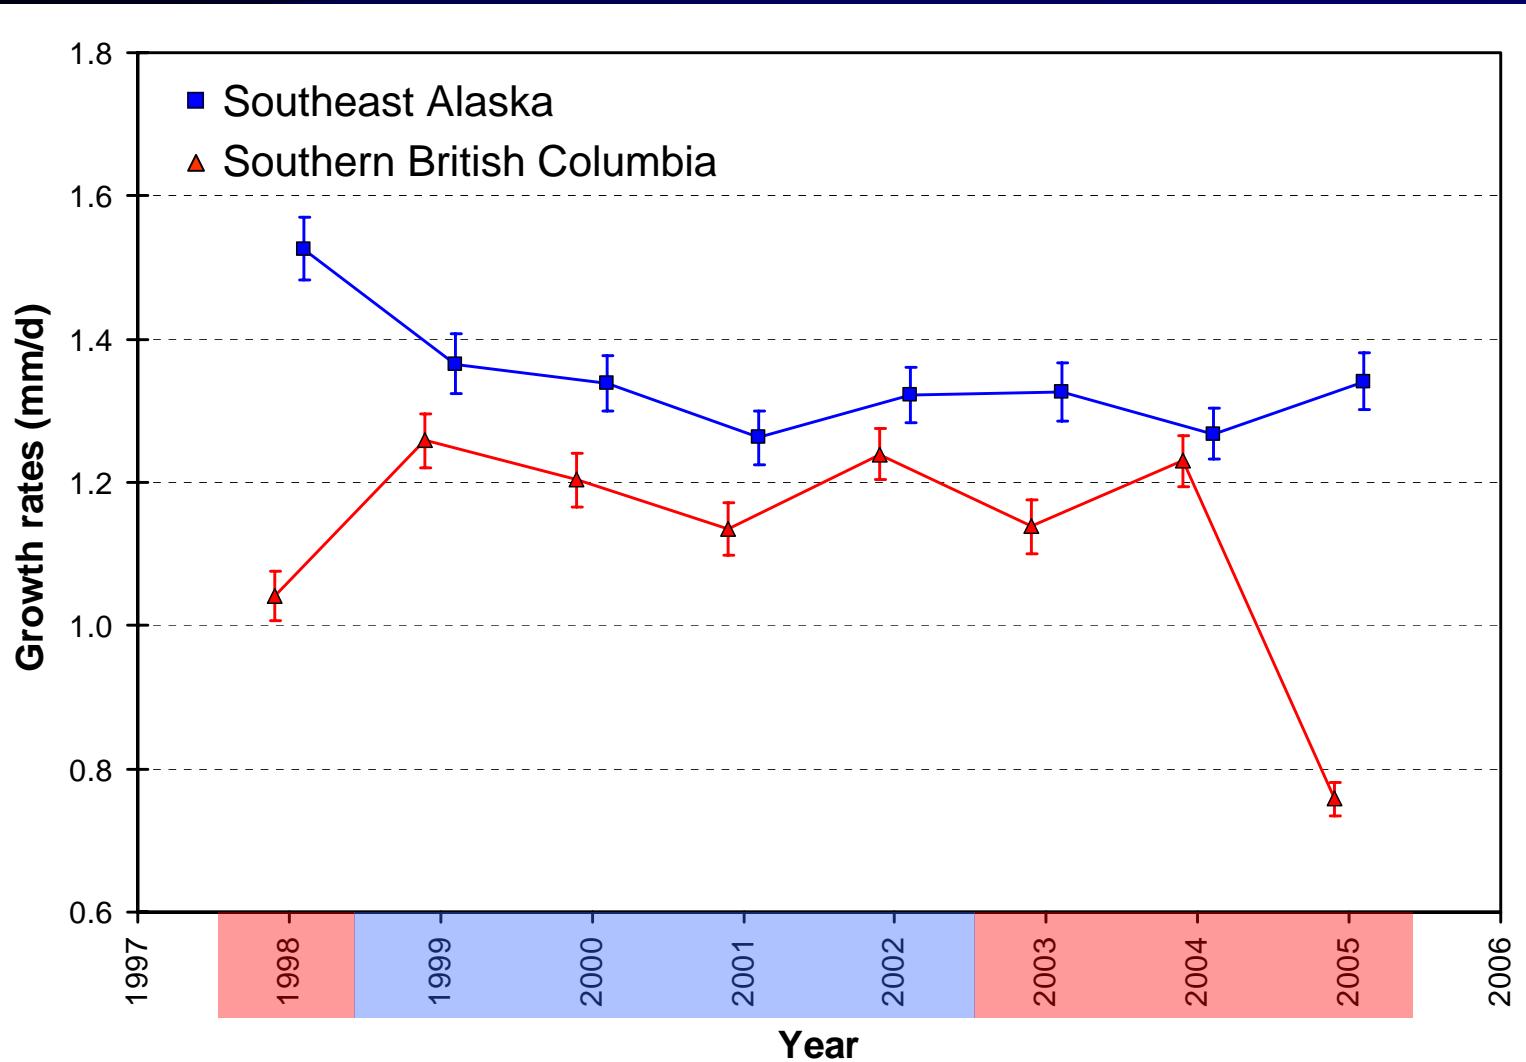

Feb – May

Ocean Conditions & Salmon growth

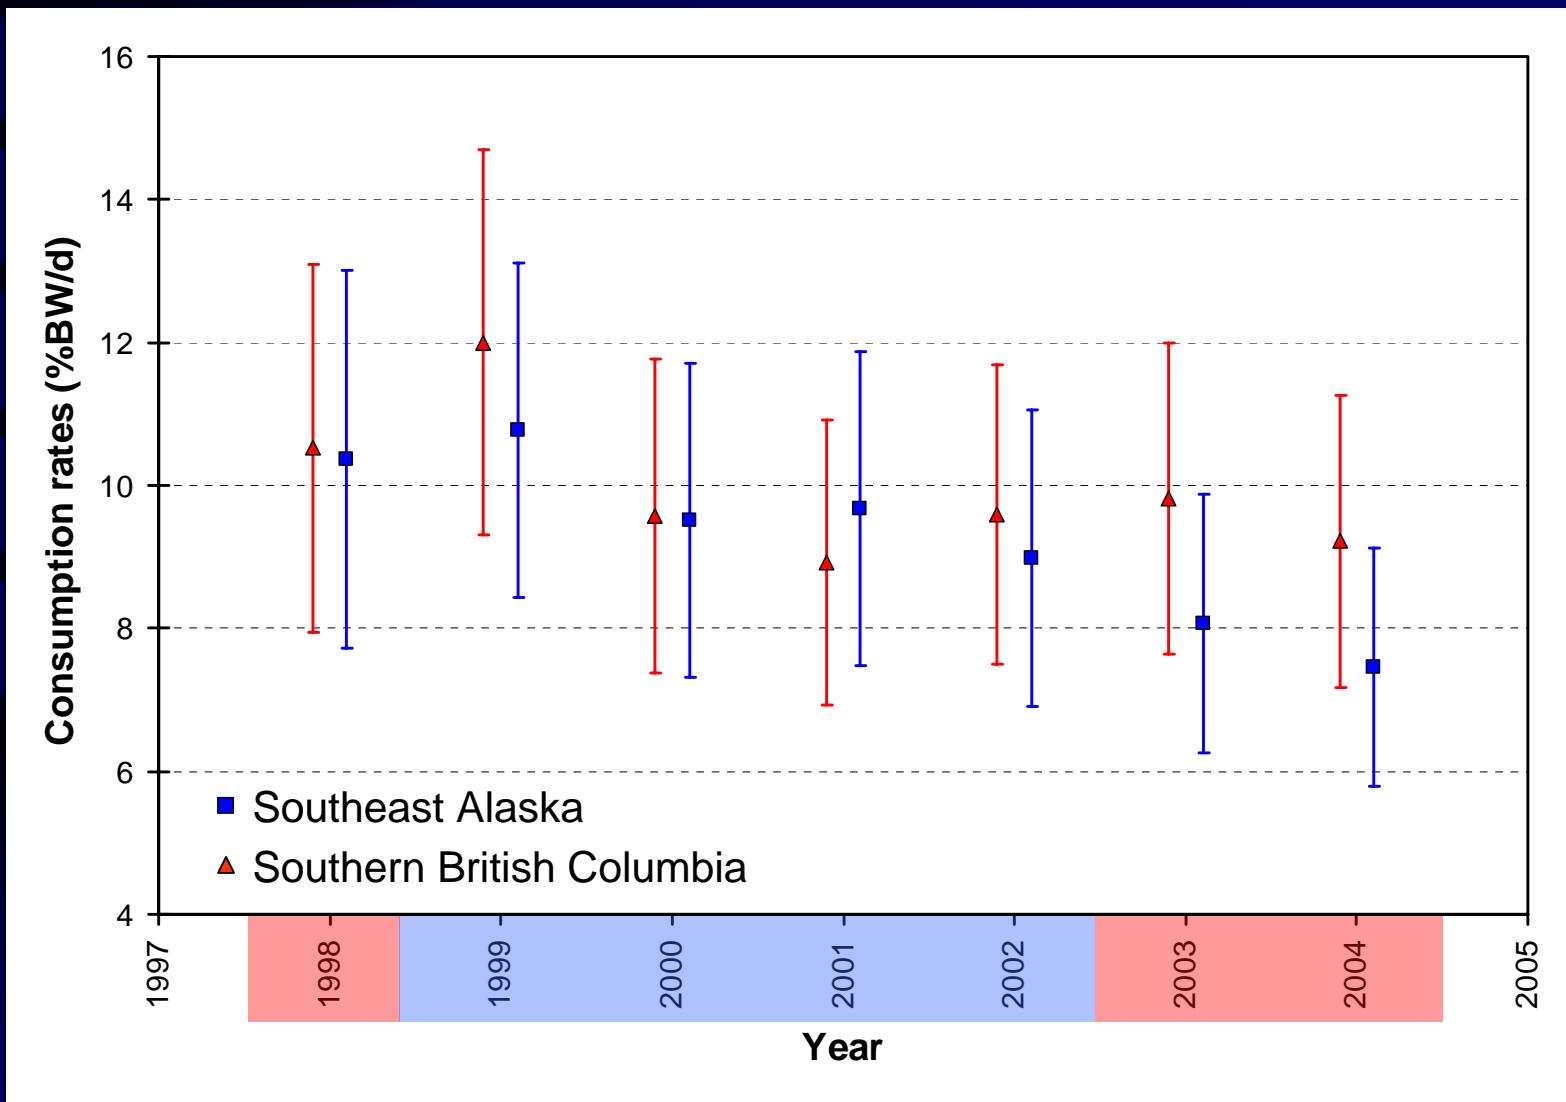

Ocean Conditions (2001-2005)

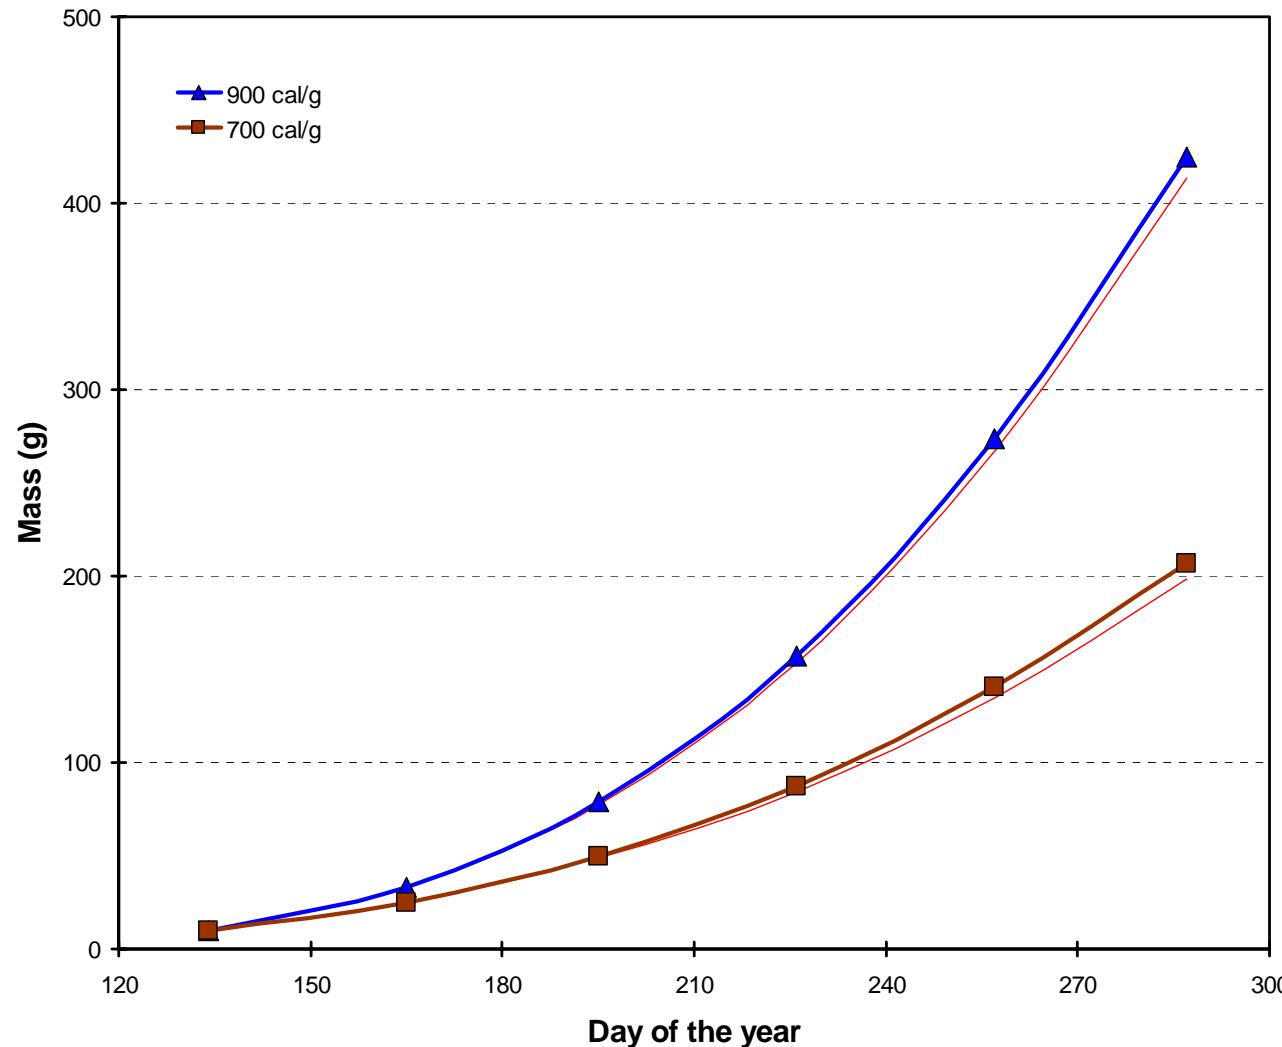

Coho Growth Rate (May-Oct)

Coho Feeding Rate (May-Oct)

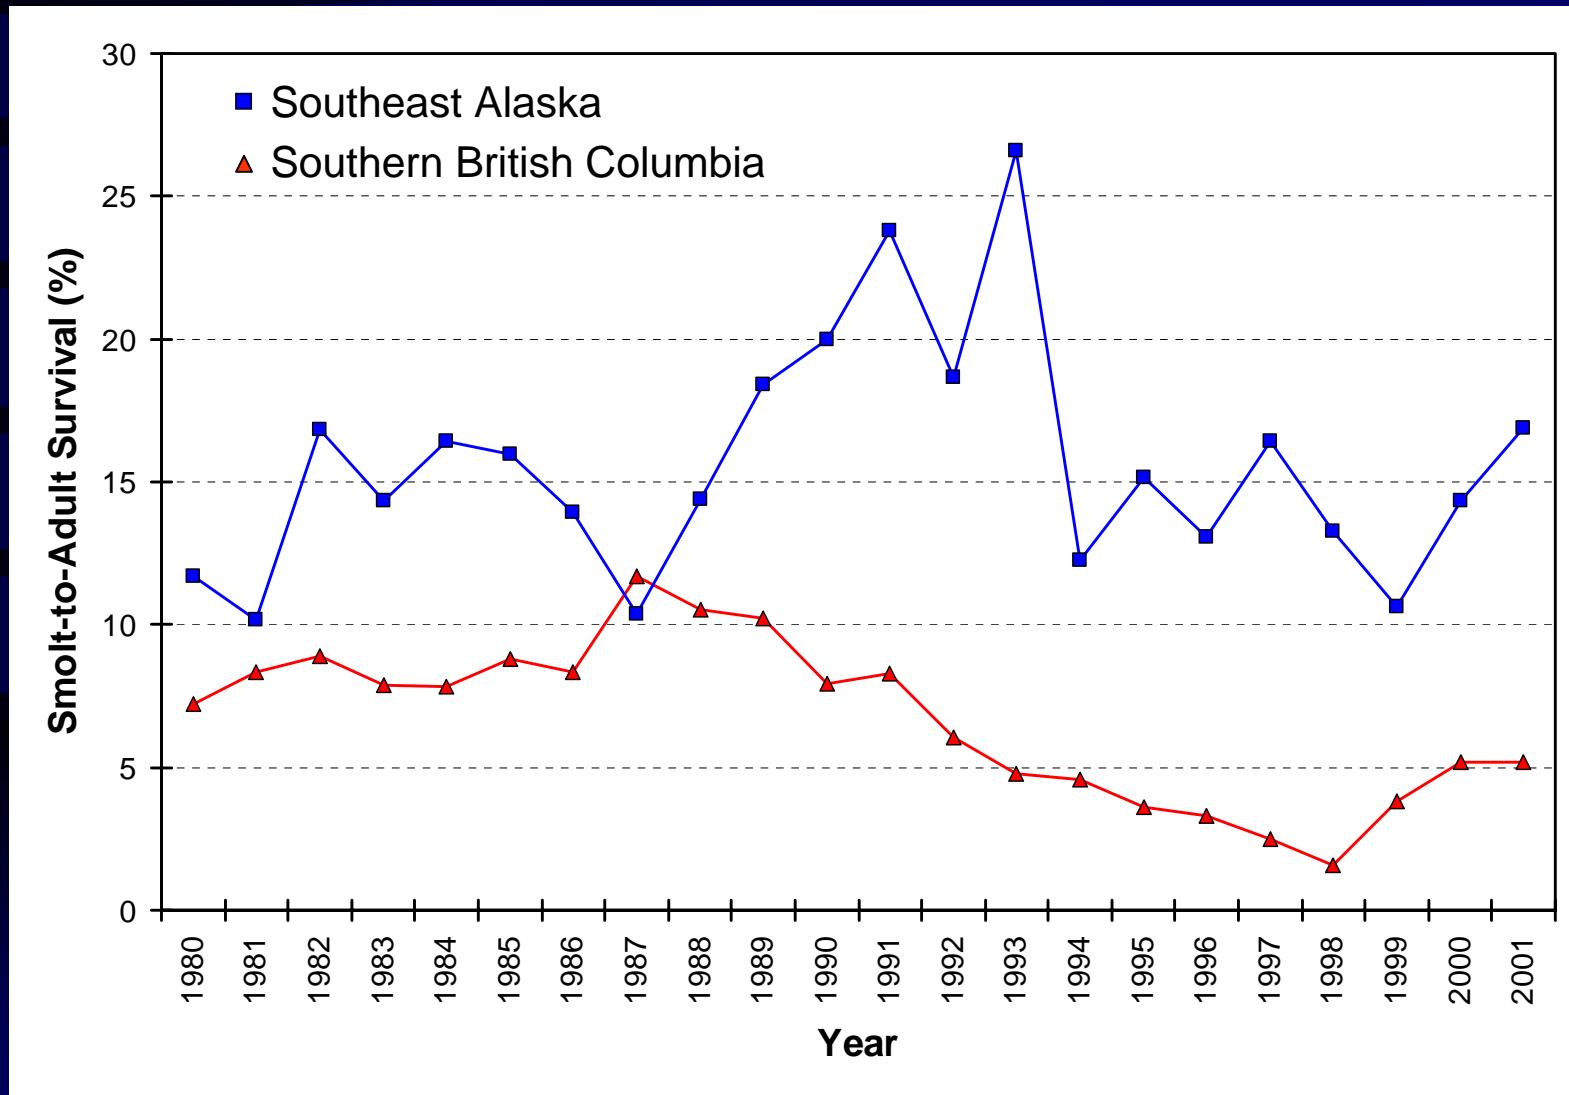

Simulated Growth of Coho (May-Oct)

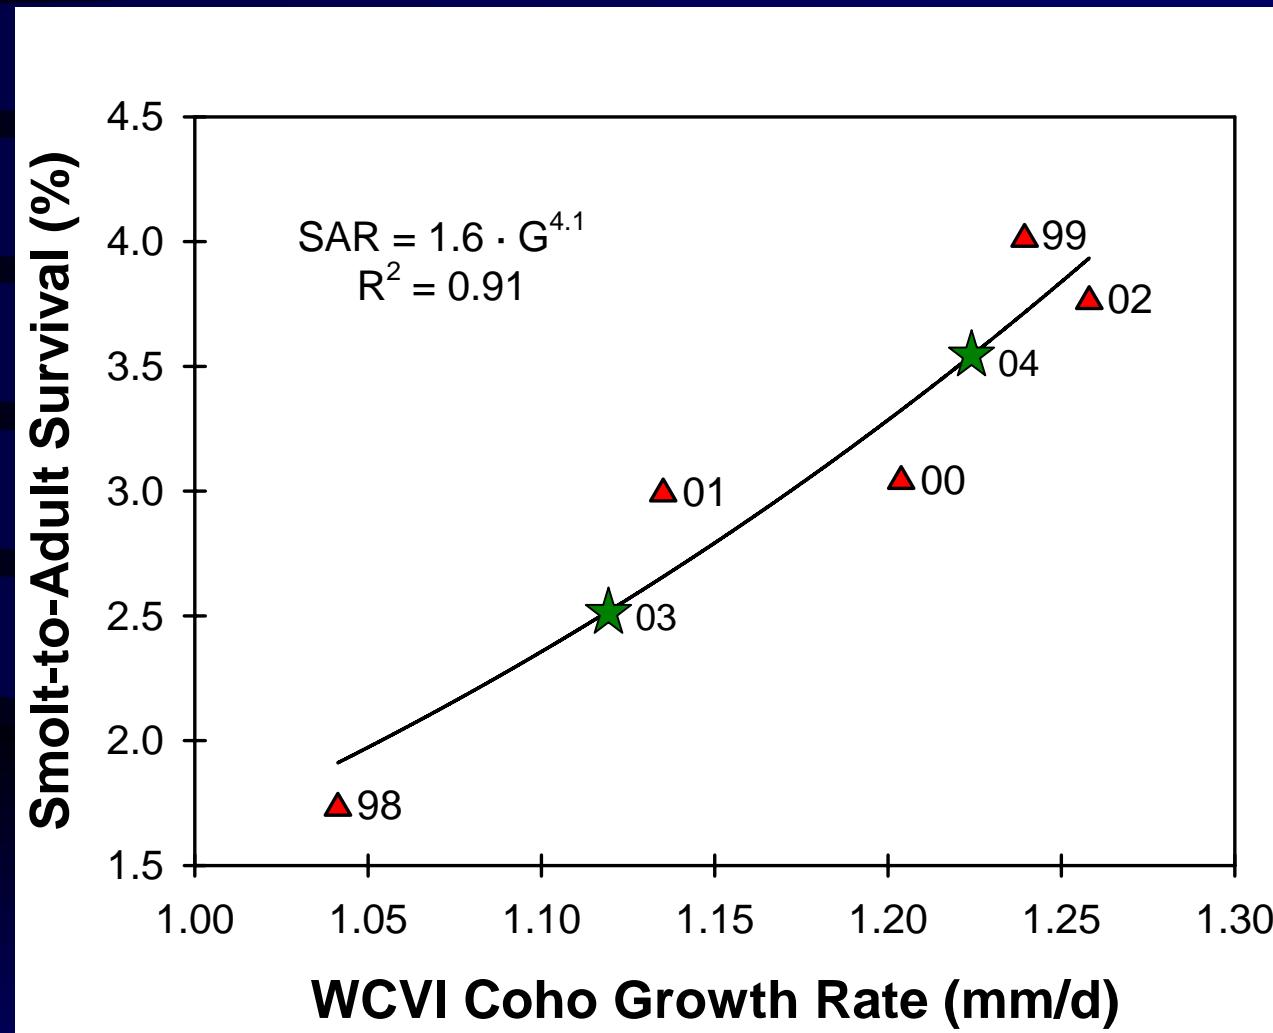

Ocean Conditions & Salmon Survival

Coho Marine Survival

Snake River Spring Chinook Survival

★ 05

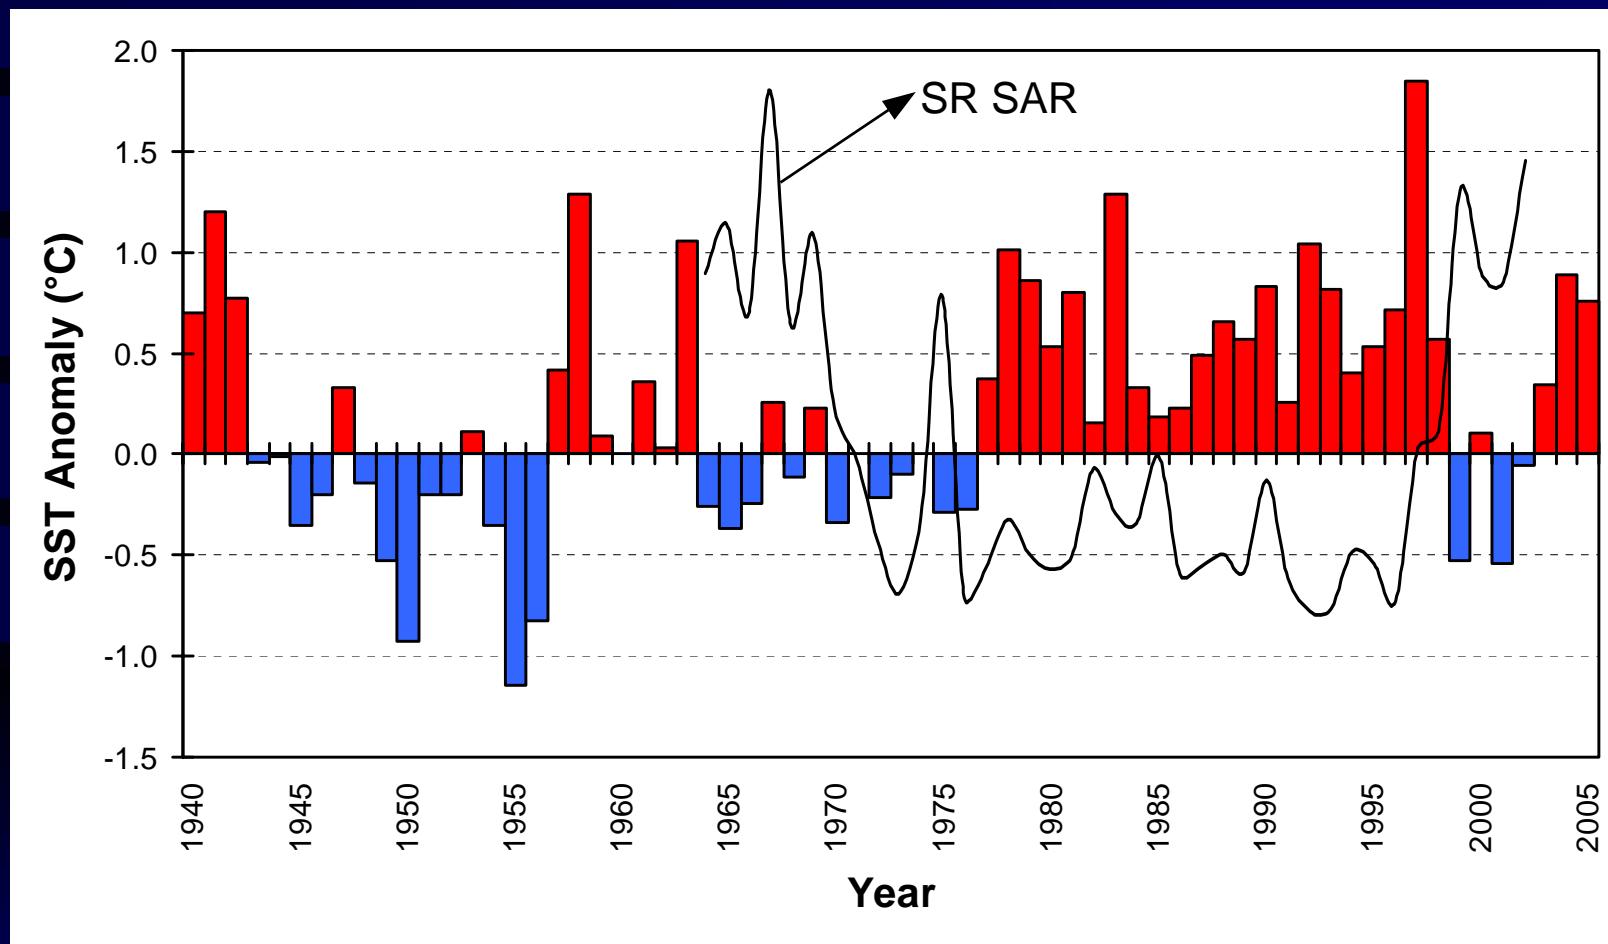

SAR from Scheuerell and Williams (2005)

Summary

1. CR Fall Chinook establish coastal residence
2. CR Spring Chinook and Coho
 - Rapid northward migration
 - CR resident off WCVI and WA
 - Some southward migration (LOCR & SR)
3. Higher growth and survival in Alaska than southern BC
4. Marine survival of CR Chinook correlated to growth potential in British Columbia
5. Changes in growth likely due to changes in prey quality

Future Directions

West Coast of Vancouver Island Temperature

Research Needs

1. Annual variation in salmon migration
 2. Direct measurements of survival
 3. Description of ocean conditions
 - Oregon
 - Washington
 - British Columbia
 - Alaska
 4. Assess the effects of ocean conditions on CR salmon
 5. Improve CR salmon forecast
-
- The diagram illustrates the research needs by grouping them into three main categories, each indicated by a large brace (bracey) on the right side of the list:
- POST + DNA**: This category groups the first two items: "Annual variation in salmon migration" and "Direct measurements of survival".
 - Ocean Survival of Salmonids**: This category groups the third item, "Description of ocean conditions", which in turn includes the sub-points: - Oregon, - Washington, - British Columbia, and - Alaska.
 - Salmon Shelf Survival Study**: This category groups the fifth item, "Improve CR salmon forecast".

Work plan for FY07-FY09

- Monitor ocean conditions in BC and Alaska
- Determine the biological attributes and migration of CR salmon
- Assess the effects of ocean conditions on CR salmon
- Develop and test metrics to forecast CR salmon runs
- Develop a bioenergetics model of CR salmon growth
- Coordinate research with POST and NMFS
- Disseminate results through publications and presentations
